CASE 488AM

Description

The MC100EP446 is an integrated 8-bit parallel to serial data converter. The device is designed with unique circuit topology to operate for NRZ data rates up to 3.2 Gb/s. The conversion sequence from parallel data into a serial data stream is from bit D0 to D7. The parallel input pins D0–D7 are configurable to be threshold controlled by CMOS, ECL, or TTL level signals. The serial data rate output can be selected at internal clock data rate or twice the internal clock data rate using the CKSEL pin.

Control pins are provided to reset (SYNC) and disable internal clock circuitry (CKEN). In either CKSEL modes, the internal flip-flops are triggered on the rising edge for CLK and the multiplexers are switched on the falling edge of CLK, therefore, all associated specification limits are referenced to the negative edge of the clock input. Additionally, V_{BB} pin is provided for single-ended input condition.

The 100 Series devices contain temperature compensation network.

Features

- 3.2 Gb/s Typical Data Rate Capability
- Differential Clock and Serial Outputs
- V_{BB} Output for Single-ended Input Applications
- Asynchronous Data Reset (SYNC)
- PECL Mode Operating Range:
 $V_{CC} = 3.0\text{ V to }5.5\text{ V with }V_{EE} = 0\text{ V}$
- NECL Mode Operating Range:
 $V_{CC} = 0\text{ V with }V_{EE} = -3.0\text{ V to }-5.5\text{ V}$
- Open Input Default State
- Safety Clamp on Inputs
- Parallel Interface Can Support PECL, TTL or CMOS
- These Devices are Pb-Free and are RoHS Compliant

MARKING DIAGRAM

xxx = 100
A = Assembly Location
WL = Wafer Lot
YY = Year
WW = Work Week
G or ■ = Pb-Free Package

(Note: Microdot may be in either location)

*For additional marking information, refer to Application Note [AND8002/D](#).

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 16 of this data sheet.

MC100EP446

Warning: All V_{CC} and V_{EE} pins must be externally connected to Power Supply to guarantee proper operation.

Figure 1. LQFP-32 Pinout (Top View)

Figure 2. QFN-32 Pinout (Top View)

Table 1. PIN DESCRIPTION

PIN	FUNCTION
D0*-D7*	ECL, CMOS, or TTL Parallel Data Input
S _{OUT} , \overline{S}_{OUT}	ECL Differential Serial Data Output
CLK*, \overline{CLK} *	ECL Differential Clock Input
PCLK, \overline{PCLK}	ECL Differential Parallel Clock Output
SYNC*, \overline{SYNC} **	ECL Conversion Synchronizing Differential Input (Reset)***
CKSEL*	ECL Clock Input Selector
CKEN*, \overline{CKEN} *	ECL Clock Enable Differential Input
V _{CF}	ECL, CMOS, or TTL Input Selector
V _{EF}	ECL Reference Mode Connection
V _{BB1} , V _{BB2}	Reference Voltage Output
V _{CC}	Positive Supply
V _{EE}	Negative Supply

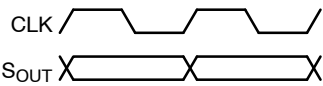

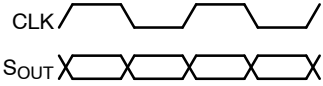

* Pins will default LOW when left open.

**Pins will default HIGH when left open.

***The rising edge of SYNC will asynchronously reset the internal circuitry. The falling edge of the SYNC followed by the falling edge of CLK initiates the conversion process synchronously on the next rising edge of CLK.

MC100EP446

Table 2. TRUTH TABLE

Pin	Function	
	HIGH	LOW
CKSEL	S _{OUT} : PCLK = 8:1 CLK: S _{OUT} = 1:1 	S _{OUT} : PCLK = 8:1 CLK: S _{OUT} = 1:2 
CKEN	Synchronously Disables Normal Parallel to Serial Conversion	Synchronously Enables Normal Parallel to Serial Conversion
SYNC	Asynchronously Resets Internal Flip-Flops*	Synchronous Enable

*The rising edge of SYNC will asynchronously reset the internal circuitry. The falling edge of the SYNC followed by the falling edge of CLK initiates the conversion process synchronously on the next rising edge of CLK.

Table 3. INPUT VOLTAGE LEVEL SELECTION TABLE

Input Function	Connect To V _{CF} Pin
ECL Mode	V _{EF} Pin
CMOS Mode	No Connect
TTL Mode*	1.5 V ± 100 mV

*For TTL Mode, if no external voltage can be provided, the reference voltage can be provided by connecting the appropriate resistor between V_{CF} and V_{EE} pins.

Figure 6. Setup and Hold Time for CKEN

APPLICATION INFORMATION

The MC100EP446 is an integrated 8:1 parallel to serial converter. An attribute for EP446 is that the parallel inputs D0–D7 (Pins 17 – 24) can be configured to accept either CMOS, ECL, or TTL level signals by a combination of interconnects between V_{EF} (Pin 27) and V_{CF} (Pin 26) pins. For CMOS input levels, leave V_{EF} and V_{CF} open. For ECL operation, short V_{CF} and V_{EF} (Pins 26 and 27). For TTL operation, connect a 1.5 V supply reference to V_{CF} and leave the V_{EF} pin open. The 1.5 V reference voltage to V_{CF} pin can be accomplished by placing a 1.5 k Ω or 500 Ω between V_{CF} and V_{EE} for 3.3 V or 5.0 V power supplies, respectively.

Note: all pins requiring ECL voltage inputs must have a 50 Ω terminating resistor to V_{TT} (V_{TT} = V_{CC} – 2.0 V).

The CKSEL input (Pin 2) is provided to enable the user to select the serial data rate output between internal clock data rate or twice the internal clock data rate. For CKSEL LOW operation, the time from when the parallel data is latched ① to when the data is seen on the S_{OUT} ② is on the falling edge of the 7th clock cycle plus internal propagation delay (Figure 7). Note the PCLK switches on the falling edge of CLK.

Figure 7. Timing Diagram 1:8 Parallel to Serial Conversion with CKSEL LOW

MC100EP446

Similarly, for CKSEL HIGH operation, the time from when the parallel data is latched ① to when the data is seen on the S_{OUT} ② is on the rising edge of the 14th clock cycle plus internal propagation delay (Figure 8). Furthermore, the PCLK switches on the rising edge of CLK.

Figure 8. Timing Diagram 1:8 Parallel to Serial Conversion with CKSEL HIGH

MC100EP446

The device also features a differential SYNC input (Pins 29 and 30), which asynchronously reset all internal flip-flops and clock circuitry on the rising edge of SYNC. The release of SYNC is a synchronous process, which ensures that no runt serial data bits are generated. The falling edge of the SYNC followed by a falling edge of CLK initiates the start of the conversion process on the next rising edge of CLK (Figures 9 and 10). As shown in the figures below, the device will start to latch the parallel input data after the a falling edge of SYNC ①, followed by the falling edge CLK ②, on the next rising of edge of CLK ③ for CKSEL LOW

Figure 9. Timing Diagram 1:8 Parallel to Serial Conversion with CKSEL LOW and SYNC

Figure 10. Synchronous Release of SYNC for CKSEL LOW

MC100EP446

For CKSEL HIGH, as shown in the timing diagrams below, the device will start to latch the parallel input data after the falling edge of SYNC ①, followed by the falling edge CLK ②, on the second rising edge of CLK ③ (Figures 11 and 12).

Figure 11. Timing Diagram 1:8 Parallel to Serial Conversion with CKSEL HIGH and SYNC

Figure 12. Synchronous Release of SYNC for CKSEL HIGH

MC100EP446

The differential synchronous CKEN inputs (Pins 6 and 7), disable the internal clock circuitry. The synchronous CKEN will suspend all of the device activities and prevent runt pulses from being generated. The rising edge of CKEN followed by the falling edge of CLK will suspend all activities. The falling edge of CKEN followed by the falling edge of CLK will resume all activities (Figure 13).

Figure 13. Timing Diagram with CKEN with CKSEL HIGH

The differential PCLK output (Pins 14 and 15) is a word framer and can help the user synchronize the serial data output, S_{OUT} (Pins 11 and 12), in their applications. Furthermore, PCLK can be used as a trigger for input parallel data (Figure 14).

An internally generated voltage supply, the V_{BB} pin, is available to this device only. For single-ended input

conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a $0.01 \mu\text{F}$ capacitor and limit current sourcing or sinking to 0.5 mA . When not used, V_{BB} should be left open. Also, both outputs of the differential pair must be terminated (50Ω to V_{TT}) even if only one output is used.

DESCRIPTION:	32 LEAD LQFP, 7X7	PAGE 1 OF 1

ON Semiconductor and are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. ON Semiconductor does not convey any license under its patent rights nor the rights of others.

onsemi, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
