

Product Overview

LV51130T: Voltage Protection, 2 Cell, Lithium-Ion, Secondary Battery

For complete documentation, see the data sheet.

LV51130T is a protection IC for 2-cell lithium-ion secondary batteries.

Features

- Detects overcharge and over-discharge conditions and controls the charging and discharging operation of each cell
- Overcharge detection accuracy ± 25 mV
- Over-discharge detection accuracy ± 100 mV
- Hysteresis of the over-discharge detection voltage is cancelled by connection of a load after overcharging has been detected
- Detects overcurrent, load shorting, and excessively high voltage of a charger
