

Low-Power, Two-Port, High-Speed, USB2.0 (480 Mbps) Switch

FSUSB43

UQFN10 1.6 × 1.20
CASE 523AZ

Description

The FSUSB43 is a bi-directional, low-power, two-port, high-speed, USB2.0 switch. Configured as a double-pole, double-throw (DPDT) switch, it is optimized for switching between two high-speed (480 Mbps) sources or a high-speed and full-speed (12 Mbps) source.

The FSUSB43 is compatible with the requirements of USB2.0 and features an extremely low on capacitance (C_{ON}) of 5.7 pF. The wide bandwidth of this device (720 MHz) exceeds the bandwidth needed to pass the third harmonic, resulting in signals with minimum edge and phase distortion. Superior channel-to-channel crosstalk also minimizes interference.

The FSUSB43 contains special circuitry on the switch I/O pins for applications where the V_{CC} supply is powered-off ($V_{CC} = 0$), which allows the device to withstand an over-voltage condition. This minimizes current consumption even when the control voltage applied to the SEL pin is lower than the supply voltage (V_{CC}). This feature is especially valuable to mobile applications, such as cell phones, allowing for direct interface with the general-purpose I/Os of the baseband processor. Other applications include switching and connector sharing in portable cell phones, PDAs, digital cameras, printers, and notebook computers.
