

# Intelligent Power Module (IPM)

600 V, 15 A

ON Semiconductor®

[www.onsemi.com](http://www.onsemi.com)

## STK531U394C-E

The STK531U394C-E is a fully-integrated inverter power stage consisting of a high-voltage driver, six IGBT's and a thermistor, suitable for driving permanent magnet synchronous (PMSM) motors, brushless-DC (BLDC) motors and AC asynchronous motors. The IGBT's are configured in a 3-phase bridge with separate emitter connections for the lower legs for maximum flexibility in the choice of control algorithm.

The power stage has a full range of protection functions including cross-conduction protection, external shutdown and under-voltage lockout functions. Output stage uses IGBT/FRD technology and implements Under Voltage Protection (UVP) and Over Current Protection (OCP: Shunt Resistor internal) with a Fault Detection output flag. Internal Boost diodes are provided for high side gate boost drive.

SIP29 44x26.5  
CASE 127ET

### Features

- Three-phase 15 A / 600 V IGBT Module with Integrated Drivers
- Typical Values (Upper Side at 15 A) :  $V_{CE(sat)} = 1.8 \text{ V}$ ,  $V_F = 2.0 \text{ V}$
- 44.0 mm × 26.5 mm Single In-line Package with Vertical LF Type
- Cross-conduction Protection
- Adjustable Over-current Protection Level
- Integrated Bootstrap Diodes and Resistors
- These Devices are Pb-Free and are RoHS Compliant

### Certification

- UL1557 (File number : E339285)

### Typical Applications

- Industrial Pumps
- Industrial Fans
- Industrial Automation
- Heat Pumps, Home Appliances

### MARKING DIAGRAM

STK531U394C = Specific Device Code  
 A = Year  
 B = Month  
 C = Production Site  
 DD = Factory Lot code  
 Device marking is on package underside

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 12 of this data sheet.

23	FAULT	Fault output
24	ISO	Current monitor output
25	VDD	+15V Main Supply
26	VSS	Negative Main Supply
27	ISD	Over current detection and setting
28	RCIN	Fault clear time setting output
29	TH	Thermistor output

NOTE: Pins 3, 4, 7, 8, 11, 12, 14, 15 are not present.

**Table 2. ABSOLUTE MAXIMUM RATINGS** at  $T_C = 25^\circ\text{C}$  (Note 1)

Rating	Symbol	Conditions	Value	Unit
Supply voltage	$V_{CC}$	P to N, surge < 500 V (Note 2)	450	V
Collector–emitter voltage	$V_{CE}$	P to U,V,W or U, V, W, to N	600	V
Output current	$I_o$	P, N, U, V, W terminal current	$\pm 15$	A
		P, N, U, V, W terminal current at $T_c = 100^\circ\text{C}$	$\pm 7$	A
Output peak current	$I_{op}$	P, N, U, V, W terminal current, PW=1ms	$\pm 30$	A
Pre–driver supply voltages	VD1,2,3,4	VB1 to U, VB2 to V, VB3 to W, $V_{DD}$ to $V_{SS}$ (Note 3)	+20	V
Input signal voltage	$V_{IN}$	HIN1, 2, 3, LIN1, 2, 3	-0.3 to $V_{DD}$	V
FAULT terminal voltage	$V_{FAULT}$	FAULT terminal	-0.3 to $V_{DD}$	V
Maximum power dissipation	$P_d$	IGBT per 1 channel	35	W
Junction temperature	$T_j$	IGBT, FRD	150	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-40 to +125	$^\circ\text{C}$
Operating case temperature	$T_c$	IPM case temperature	-20 to +100	$^\circ\text{C}$
Package mounting torque		Case mounting screw	0.9	Nm
Isolation voltage	$V_{is}$	50 Hz sine wave AC 1 minute (Note 4)	2000	Vrms

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS, RECOMMENDED OPERATING RANGES and/or APPLICATION INFORMATION for Safe Operating parameters
2. This surge voltage developed by the switching operation due to the wiring inductance between P and N terminals.
3. VD1=VB1 to U, VD2 = VB2 to V, VD3 = VB3 to W, VD4 = VDD to VSS terminal voltage.
4. Test conditions: AC 2500 V, 1 s.

# STK531U394C-E

**Table 3. RECOMMENDED OPERATING RANGES** (Note 5)

Rating	Symbol	Conditions	Min	Typ	Max	Unit
Supply voltage	$V_{CC}$	P to N	0	280	450	V
Pre-driver supply voltage	VD1, 2, 3	VB1 to U, VB2 to V, VB3 to W	12.5	15	17.5	V
	VD4	$V_{DD}$ to $V_{SS}$ (Note 5)	13.5	15	16.5	V
PWM frequency	$f_{PWM}$		1	-	20	kHz
Dead time	DT	Turn-off to turn-on (external)	2	-	-	$\mu s$
Allowable input pulse width	PWIN	ON and OFF	1	-	-	$\mu s$
Package mounting torque		'M3' type screw	0.6	-	0.9	Nm

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

5. Pre-drive power supply (VD4 = 15  $\pm$  1.5 V) must have the capacity of  $I_o = 20$  mA (DC), 0.5 A (Peak).

## STK531U394C–E

**Table 4. ELECTRICAL CHARACTERISTICS** at  $T_c = 25^\circ\text{C}$ ,  $V_{D1}, V_{D2}, V_{D3}, V_{D4} = 15\text{ V}$  (continued)

Parameter	Test Conditions	Symbol	Min	Typ	Max	Unit
Logic 1 input current	$V_{IN} = +3.3\text{ V}$	$I_{IN+}$	–	100	143	$\mu\text{A}$
Logic 0 input current	$V_{IN} = 0\text{ V}$	$I_{IN-}$	–	–	2	$\mu\text{A}$
FAULT terminal sink current	FAULT : ON / $V_{FAULT} = 0.1\text{ V}$	$I_{oSD}$	–	2	–	mA
FAULT clearance delay time	Fault output latch time	FLTCLR	18	–	80	ms
VCC and VS undervoltage positive going threshold		$V_{CCUV+}$ $V_{SUV+}$	10.5	11.1	11.7	V
VCC and VS undervoltage negative going threshold		$V_{CCUV-}$ $V_{SUV-}$	10.3	10.9	11.5	V
VCC and VS undervoltage hysteresis		$V_{CCUVH}$ $V_{SUVH-}$	0.14	0.2	–	V
Over current protection level	$PW=100\ \mu\text{s}$ , $RSD = 0\ \Omega$	ISD	22.0	–	27.8	A
Electric current output signal level	$I_o = 15\text{ A}$	ISO	0.36	0.38	0.40	V

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

6. The lower side's  $V_{CE(SAT)}$  and  $V_F$  include a loss by the shunt resistance.

7. Input threshold voltage hysteresis indicates a reference value based on the design value of built-in pre-driver IC.

APPLICATIONS INFORMATION

Input / Output Timing Chart

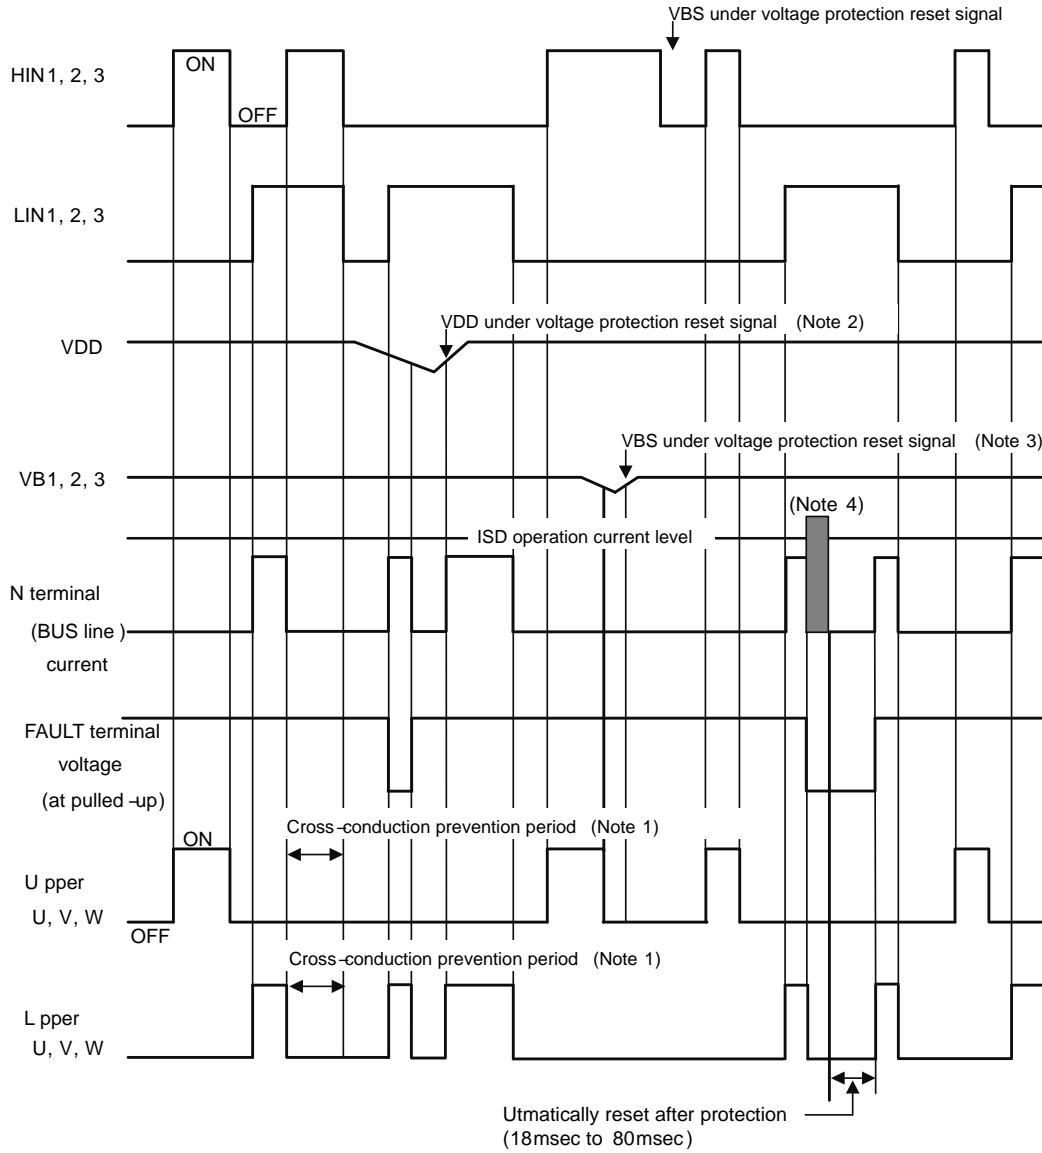

Figure 4. Input / Output Timing Chart

Notes:

1. Diagram shows the prevention of shoot-through via control logic. More dead time to account for switching delay needs to be added externally.
2. When VDD decreases all gate output signals will go low and cut off all of 6 IGBT outputs. When VDD rises the operation will resume immediately.
3. When the upper side gate voltage at VB1, VB2 and VB3 drops only, the corresponding upper side

output is turned off.

The outputs return to normal operation immediately after the upper side gate voltage rises.

4. In case of over current detection, all IGBT's are turned off and the FAULT output is asserted. Normal operation resumes in 18 to 80 ms after the over current condition is removed.

# STK531U394C-E

**Table 5. INPUT / OUTPUT LOGIC TABLE**

INPUT			OUTPUT			
HIN	LIN	OCP	Upper side IGBT	Lower side IGBT	U,V,W	FAULT

	R <sub>100</sub>	T <sub>c</sub> = 100°C	5.18	5.38	5.60	kΩ
B-Constant (25 to 50°C)	B		4208	4250	4293	K
Temperature Range			-40	-	+125	°C

**Figure 5. Thermistor Resistance versus Case Temperature**

Conditions: R<sub>TH</sub> = 39 kΩ, pull-up voltage 5.0 V

Figure 6. Thermistor Voltage versus Case Temperature

**FAULT Output**

The FAULT terminal is an open drain output requiring a pull-up resistor. If the pull-up voltage is 5 V, use a pull-up resistor with a value of 6.8 kΩ or higher. If the pull-up voltage is 15 V, use a pull-up resistor with a value of 20 kΩ or higher. The FAULT output is triggered if there is a V<sub>DD</sub> undervoltage or an overcurrent condition.

The terminal has a function of enable output, this pin is used to enable or shut down the built-in driver. If the voltage on the FAULT pin rises above the ENABLE ON-state voltage, the output drivers are enabled. If the voltage on the ELTEN pin falls below the ENABLE OFF-state voltage, the drivers are disabled.

**Undervoltage Lockout Protection**

If V<sub>DD</sub> goes below the V<sub>DD</sub> supply undervoltage lockout falling threshold, the FAULT output is switched on. The FAULT output stays on until V<sub>DD</sub> rises above the V<sub>DD</sub> supply undervoltage lockout rising threshold. After V<sub>DD</sub> has risen above the threshold to enable normal operation, the driver waits to receive an input signal on the LIN input before enabling the driver for the HIN signal.

**Overcurrent protection**

The over current protection feature is not intended to protect in exceptional fault condition. An external fuse is recommended for safety.

An additional fuse is recommended to protect against system level or abnormal over-current fault conditions.

**Capacitors on High Voltage and V<sub>DD</sub> Supplies**

Both the high voltage and V<sub>DD</sub> supplies require an electrolytic capacitor and an additional high frequency capacitor.

**Minimum Input Pulse Width**

When input pulse width is less than 1.0 μs, an output may not react to the pulse. (Both ON signal and OFF signal)

**Calculation of Bootstrap Capacitor Value**

The bootstrap capacitor value C<sub>B</sub> is calculated using the following approach. The following parameters influence the choice of bootstrap capacitor:

- VBS: Bootstrap power supply.  
15 V is recommended.
- QG: Total gate charge of IGBT at VBS = 15 V.  
132 nC
- UVLO: Falling threshold for UVLO.  
Specified as 12 V.
- I<sub>D</sub>MAX: High side drive consumption current.  
Specified as 0.4 mA
- t<sub>ON</sub>MAX: Maximum ON pulse width of high side IGBT.

Capacitance calculation formula:

$$C_B = (Q_G + I_{D_{MAX}} * t_{ON_{MAX}}) / (V_{BS} - UVLO)$$

C<sub>B</sub> is recommended to be approximately 3 times the value calculated above. The recommended value of C<sub>B</sub> is in the

range of 1 to 47  $\mu\text{F}$ , however, the value needs to be verified prior to production. When not using the bootstrap circuit, each high side driver power supply requires an external independent power supply.

The internal bootstrap circuit uses a MOSFET. The turn on time of this MOSFET is synchronized with the turn on of the low side IGBT. The bootstrap capacitor is charged by turning on the low side IGBT.

If the low side IGBT is held on for a long period of time (more than one second for example), the bootstrap voltage on the high side MOSFET will slowly discharge.

Figure 7. Bootstrap Capacitance versus  $t_{ONMAX}$

Table 7. MOUNTING INSTRUCTIONS

Item	Recommended Condition
Pitch	40.6 $\pm$ 0.1 mm (Please refer to Package Outline Diagram)
Screw	Diameter: M3 Screw head types: pan head, truss head, binding head
Washer	Plane washer The size is D = 7 mm, d = 3.2 mm and t = 0.5 mm JIS B 1256
Heat sink	Material: Aluminum or Copper Warpage (the surface that contacts IPM): -50 to 100 $\mu\text{m}$ Screw holes must be countersunk. No contamination on the heat sink surface that contacts IPM.
Torque	Temporary tightening: 20 to 30 % of final tightening on first screw Temporary tightening: 20 to 30 % of final tightening on second screw Final tightening: 0.6 to 0.9 Nm on first screw Final tightening: 0.6 to 0.9 Nm on second screw
Grease	Silicone grease. Thickness: 100 to 200 $\mu\text{m}$ Uniformly apply silicone grease to whole back. Thermal foils are only recommended after careful evaluation. Thickness, stiffness and compressibility parameters have a strong influence on performance.
