

# ESDR7534

## ESD Protection Diode

### Low Capacitance ESD Protection for LVDS Interfaces

The ESDR7534 surge protection is designed to protect high speed data lines from ESD, EFT, and lightning.

#### Features

- Low Capacitance (2 pF Maximum Between I/O Lines and GND)
- Protection for the Following IEC Standards:  
IEC 61000-4-2 (ESD) Level 4 –  $\pm 30$  kV (Contact);  $\pm 30$  kV (Air)
- This is a Pb-Free Device

#### MAXIMUM RATINGS ( $T_J = 25^\circ\text{C}$ unless otherwise noted)

Rating	Symbol	Value	Unit
Peak Power Dissipation (Note 1)	$P_{pk}$	300	W
Maximum Peak Pulse Current 2/10 $\mu\text{s}$ @ $T_A = 25^\circ\text{C}$	$I_{pp}$	10	A
Operating Junction Temperature Range	$T_J$	$-55$ to $+125$	$^\circ\text{C}$
Storage Temperature Range	$T_{stg}$	$-55$ to $+150$	$^\circ\text{C}$
Lead Solder Temperature – Maximum (10 Seconds)	$T_L$	260	$^\circ\text{C}$
IEC 61000-4-2 Contact IEC 61000-4-2 Air ISO 10605 330 pF / 330 $\Omega$ Contact ISO 10605 330 pF / 2 k $\Omega$ Contact ISO 10605 150 pF / 2 k $\Omega$ Contact	ESD	$\pm 30$ $\pm 30$ $\pm 30$ $\pm 30$ $\pm 30$	kV

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1.  $P_{pk}$  calculated.  $P_{pk} = V_C \times I_{pp}$ .

Table 1. PIN DESCRIPTIONS

4-Channel, 6-Lead SC70-6			
Pin	Name	Type	Description
1	CH1	I/O	ESD Channel
2	$V_N$	GND	Negative Voltage Supply Rail
3	CH2	I/O	ESD Channel
4	CH3	I/O	ESD Channel
5	$V_P$	PWR	Positive Voltage Supply Rail
6	CH4	I/O	ESD Channel

# ELECTRICAL CHARACTERISTICS

( $T_A = 25^\circ\text{C}$  unless otherwise noted)

Symbol	Parameter
$I_{PP}$	Maximum Reverse Peak Pulse Current
$V_C$	Clamping Voltage @ $I_{PP}$
$V_{RWM}$	Working Peak Reverse Voltage
$I_R$	Maximum Reverse Leakage Current @ $V_{RWM}$
$V_{BR}$	Breakdown Voltage @ $I_T$
$I_T$	Test Current
$I_F$	Forward Current
$V_F$	Forward Voltage @ $I_F$
$P_{pk}$	Peak Power Dissipation
C	Capacitance @ $V_R = 0$ and $f = 1.0$ MHz

\*See Application Note AND8308/D for detailed explanations of datasheet parameters.

# ELECTRICAL CHARACTERISTICS ( $T_A=25^\circ\text{C}$ unless otherwise specified)

Parameter	Symbol	Conditions	Min	Typ	Max	Unit
Reverse Working Voltage	$V_{RWM}$	(Note 1)			5.0	V
Breakdown Voltage	$V_{BR}$	$I_T = 1$ mA, (Note 2)	6.0	8.0	9.5	V
Reverse Leakage Current	$I_R$	$V_{RWM} = 5$ V			3.0	$\mu\text{A}$
Forward Voltage	$V_F$	$I_F = 100$ mA			1.6	V
Clamping Voltage	$V_C$	$I_{PP} = 10$ A (2/10 $\mu\text{s}$ Waveform)			30	V
Maximum Peak Pulse Current	$I_{PP}$	2/10 $\mu\text{s}$ Waveform			10	A
Junction Capacitance	$C_J$	$V_R = 0$ V, $f = 1$ MHz between I/O Pins and GND		1.3	2.0	pF
Junction Capacitance	$C_J$	$V_R = 0$ V, $f = 1$ MHz between I/O Pins, $V_P$ floating		0.7	1.0	pF

1. Surge protection devices are normally selected according to the working peak reverse voltage ( $V_{RWM}$ ), which should be equal or greater than the DC or continuous peak operating voltage level.
2.  $V_{BR}$  is measured at pulse test current  $I_T$ .

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

IEC 61000-4-2 Spec.

Level	Test Voltage (kV)	First Peak Current (A)	Current at 30 ns (A)	Current at 60 ns (A)
1	2	7.5	4	2
2	4	15	8	4
3	6	22.5	12	6
4	8	30	16	8

Figure 3. IEC61000-4-2 Spec

Figure 4. Diagram of ESD Test Setup

The following is taken from Application Note AND8308/D – Interpretation of Datasheet Parameters for ESD Devices.

ESD Voltage Clamping

For sensitive circuit elements it is important to limit the voltage that an IC will be exposed to during an ESD event to as low a voltage as possible. The ESD clamping voltage is the voltage drop across the ESD protection diode during an ESD event per the IEC61000-4-2 waveform. Since the IEC61000-4-2 was written as a pass/fail spec for larger

systems such as cell phones or laptop computers it is not clearly defined in the spec how to specify a clamping voltage at the device level. ON Semiconductor has developed a way to examine the entire voltage waveform across the ESD protection diode over the time domain of an ESD pulse in the form of an oscilloscope screenshot, which can be found on the datasheets for all ESD protection diodes. For more information on how ON Semiconductor creates these screenshots and how to interpret them please refer to AND8307/D.

Figure 6. CV Characteristic Curve

## APPLICATIONS INFORMATION

The new ESDR7534 is a low capacitance surge protection diode array designed to protect sensitive electronics such as communications systems, computers, and computer peripherals against damage due to ESD events or transient overvoltage conditions. Because of its low capacitance, it can be used in high speed I/O data lines. The integrated design of the ESDR7534 offers low capacitance steering diodes and an internal surge protection diode ( $V_P$  diode) integrated in a single package. If a transient condition occurs, the steering diodes will drive the transient to the positive rail of the power supply or to ground. The surge protection device protects the power line against overvoltage conditions to avoid damage to the power supply and any downstream components.

### ESDR7534 Configuration Options

The ESDR7534 is able to protect up to four data lines against transient overvoltage conditions by driving them to a fixed reference point for clamping purposes. The steering diodes will be forward biased whenever the voltage on the protected line exceeds the reference voltage ( $V_f$  or  $V_{CC} + V_f$ ). The diodes will force the transient current to bypass the sensitive circuit.

Data lines are connected at pins 1, 3, 4 and 6. The negative reference is connected at pin 2. This pin must be connected directly to ground by using a ground plane to minimize the PCB's ground inductance. It is very important to reduce the PCB trace lengths as much as possible to minimize parasitic inductances.

#### Option 1

Protection of four data lines and the power supply using  $V_{CC}$  as reference.

For this configuration, connect pin 5 directly to the positive supply rail ( $V_{CC}$ ), the data lines are referenced to the supply voltage. The  $V_P$  diode prevents overvoltage on the supply rail. Biasing of the steering diodes reduces their capacitance.

#### Option 2

Protection of four data lines with bias and power supply isolation resistor.

The ESDR7534 can be isolated from the power supply by connecting a series resistor between pin 5 and  $V_{CC}$ . A 10 kΩ resistor is recommended for this application. This will maintain a bias on the  $V_P$  and steering diodes, reducing their capacitance.

#### Option 3

Protection of four data lines using the  $V_P$  diode as reference.

In applications lacking a positive supply reference or those cases in which a fully isolated power supply is required, the  $V_P$  can be used as the reference. For these applications, pin 5 is not connected. In this configuration, the steering diodes will conduct whenever the voltage on the protected line exceeds the  $V_{BR}$  of the I/O (CHX) pin.
