

# Octal D-Type Latch / 3-STATE Octal D-Type Flip-Flop

## MM74HCT573/MM74HCT574

### General Description

The MM74HCT573 octal D-type latches and MM74HCT574 octal D-type flip-flop advanced silicon-gate CMOS technology, which provides the inherent benefits of low power consumption and wide power supply range, but are LS-TTL input and output characteristic and pin-out compatible. The 3-STATE outputs are capable of driving 15 LS-TTL loads. All inputs are protected from damage due to static discharge by internal diodes to  $V_{CC}$  and ground.

When the MM74HCT573 Latch Enable input is HIGH, the Q outputs will follow the D inputs. When the Latch Enable goes LOW, data at the D inputs will be retained at the outputs until Latch Enable returns HIGH again. When a high logic level is applied to the Output Control input, all outputs go to a high impedance state, regardless of what signals are present at the other inputs and the state of the storage elements.

The MM74HCT574 are positive edge triggered flip-flops. Data at the D inputs, meeting the setup and hold time requirements, are transferred to the Q outputs on positive going transitions of the Clock (CK) input. When a high logic level is applied to the Output Control (OC) input, all outputs go to a high impedance state, regardless of what signals are present at the other inputs and the state of the storage elements.

The MM74HCT devices are intended to interface between TTL and NMOS components and standard CMOS devices. These parts are also plug in replacements for LS-TTL devices and can be used to reduce power consumption in existing designs.

### Features

- TTL Input Characteristic Compatible
- Typical Propagation Delay: 17 ns
- Low Input Current: 1  $\mu$ A Maximum
- Low Quiescent Current: 160  $\mu$ A Maximum
- Compatible with Bus-oriented Systems
- Output Drive Capability: 15 LS-TTL Loads
- These are Pb-Free Devices

## ABSOLUTE MAXIMUM RATINGS (Note 1)

| Symbol           | Parameter                               |                   | Rating                   |
|------------------|---|-------------------|--------------------------|
| $V_{CC}$         | Supply Voltage                          |                   | –0.5 to +7.0 V           |
| $V_{IN}$         | DC Input Voltage                        |                   | –0.5 to $V_{CC} + 0.5$ V |
| $V_{OUT}$        | DC Output Voltage                       |                   | –0.5 to $V_{CC} + 0.5$ V |
| $I_{IK}, I_{OK}$ | Clamp Diode Current                     |                   | ±20 mA                   |
| $I_{OUT}$        | DC Output Current, per Pin              |                   | ±35 mA                   |
| $I_{CC}$         | DC $V_{CC}$ or GND Current, per Pin     |                   | ±70 mA                   |
| $T_{STG}$        | Storage Temperature Range               |                   | –65°C to +150°C          |
| $P_D$            | Power Dissipation                       | S.O. Package only | 500 mW                   |
| $T_L$            | Lead Temperature (Soldering 10 Seconds) |                   | 260°C                    |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Unless otherwise specified all voltages are referenced to ground.

## RECOMMENDED OPERATING CONDITIONS

| Symbol            | Parameter                   | Min | Max      | Unit |
|-------------------|-----------------------------|-----|----------|------|
| $V_{CC}$          | Supply Voltage              | 4.5 | 5.5      | V    |
| $V_{IN}, V_{OUT}$ | DC Input or Output Voltage  | 0   | $V_{CC}$ | V    |
| $T_A$             | Operating Temperature Range | –55 | +125     | °C   |
| $t_r, t_f$        | Input Rise or Fall Times    |     | 500      | ns   |

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

|                                     |   | OC = GND  | –                     | 52                | –                              | –                               | pF   |

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

3.  $C_{PD}$  determines the no load dynamic power consumption,  $P_D = C_{PD} V_{CC}^2 f + I_{CC} V_{CC}$ , and the no load dynamic current consumption,  $I_S = C_{PD} V_{CC}^2 f + I_{CC}$ .

SCALE 1:1

SOIC-20 WB  
CASE 751D-05  
ISSUE H

DATE 22 APR 2015

NOTES:

1. DIMENSIONS ARE IN MILLIMETERS.
2. INTERPRET DIMENSIONS AND TOLERANCES PER ASME Y14.5M, 1994.
3. DIMENSIONS D AND E DO NOT INCLUDE MOLD PROTRUSION.
4. MAXIMUM MOLD PROTRUSION 0.15 PER SIDE.
5. DIMENSION B DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE PROTRUSION SHALL BE 0.13 TOTAL IN EXCESS OF B DIMENSION AT MAXIMUM MATERIAL CONDITION.

| DIM | MILLIMETERS |       |
|-----|-------------|-------|
|     | MIN         | MAX   |
| A   | 2.35        | 2.65  |
| A1  | 0.10        | 0.25  |
| b   | 0.35        | 0.49  |
| c   | 0.23        | 0.32  |
| D   | 12.65       | 12.95 |
| E   | 7.40        | 7.60  |
| e   | 1.27 BSC    |       |
| H   | 10.05       | 10.55 |
