Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and not valid simultaneously. If stress limits are exceeded device functional operation is not implied, damage may occur and reliability may be affected.
- JEDEC standard multilayer board – 2S2P (2 signal, 2 power).

- White noise floor.
- This parameter refers to the random jitter only.
- The output RMS phase jitter can be calculated using the following equation:

$$(\text{Output RMS Phase Jitter})^2 = (\text{Input RMS Phase Jitter})^2 + (\text{Additive RMS Phase Jitter})^2$$
- Measured with input voltage swing from 0 V to 1.8 V.
