Subject: Conflict minerals sourced from the Democratic Republic of Congo (DRC) or adjoining countries

To our Valued Customer:

As a purchaser of products containing the minerals tin, tantalum, tungsten or gold from suppliers for use in our manufacturing process, ON Semiconductor continues to be concerned about the report of violence and human rights violations resulting from the sourcing of such minerals from the DRC and adjoining countries. As a result of Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act and related U.S. Securities and Exchange Commission implementing rules which starting in 2013, subjects public companies to disclosure requirements for the purpose of promoting awareness on the use of conflict minerals. In response to evolving customer, industry and regulatory requirements, ON Semiconductor is making this public statement.

Conflict minerals are obtained from sources worldwide, and ON Semiconductor does not desire to eliminate those originating in the DRC and adjoining countries. However, the company is committed to ensuring conflict free sourcing of minerals from our supply chain through collaboration with our suppliers, specifically, as a member of the Electronic Industry Citizenship Coalition (EICC) and a participant in the Conflict Free Sourcing Initiative (CFSI), which began as a joint effort between the EICC and Global e-Sustainability Initiative (GeSI). Being a member of the initiative requires that members engage in reasonable due diligence with their supply chain to assure such minerals are not being sourced from entities supporting armed conflict within the DRC and adjoining countries. The company also recognizes the importance of supporting responsible mineral sourcing from the DRC and adjoining countries so as not to negatively impact the economies of those countries.

We expect our suppliers to engage in due diligence to analyze their sources and to complete the CFSI Conflict Minerals Reporting Template (CMRT). Suppliers must ensure that all minerals sold to or used to manufacture products for use by ON Semiconductor originate from certified conflict free smelters validated as compliant by the CFSI protocol. This global initiative utilizes an independent third party to evaluate a smelter's procurement activities and determine if the smelter demonstrates that minerals they processed originated from conflict free sources. The list of compliant smelters and refineries is posted on www.conflictreesmelter.org.

Based on the information we have gathered from our suppliers, any minerals used from the DRC or adjoining countries have been certified to be conflict free. Supplier conformance and incorporation of new requirements are an on-going process. We will continue to review and update our information as necessary. If we become aware that our supply chain includes minerals from the DRC or adjoining countries we will take action to promptly review the circumstances and remedy the situation as appropriate.
