

## onsemi Rare Earth Elements Statement

May 30, 2025

onsemi is aware of the recent material export restrictions of rare earth elements and their important use in the production of electronic products and manufacturing.

List of rare earth elements:

<i>Cerium</i>	<i>Europium</i>	<i>Lanthanum</i>	<i>Praseodymium</i>	<i>Scandium</i>	<i>Ytterbium</i>
<i>Dysprosium</i>	<i>Gadolinium</i>	<i>Lutetium</i>	<i>Promethium</i>	<i>Terbium</i>	<i>Yttrium</i>
<i>Erbium</i>	<i>Holmium</i>	<i>Neodymium</i>	<i>Samarium</i>	<i>Thulium</i>	

onsemi conducted thorough due diligence in its supply chain and confirmed that **the majority of our products do not contain any rare earth elements**. However, a small number of products utilize Yttrium in gold wirebond as a dopant at very minimal amounts to improve its material strength and stability at high temperature applications. We have also verified that Yttrium is not sourced from China, and our supplier has sufficient inventory to support onsemi operations for a minimum of 12 months.

onsemi expects our suppliers to continuously analyze and monitor the supply of rare earth elements in their supply chain and proactively communicate any potential source disruptions.

For any grievance reporting or inquiry about this statement, please contact onsemi through [Responsible.Minerals@onsemi.com](mailto:Responsible.Minerals@onsemi.com).
