

CSPEMI606/608

LCD EMI Filter Array with ESD Protection

Description

The CSPEMI606 and CSPEMI608 are EMI filter arrays with ESD protection, which integrate six and eight Pi-filters (C-R-C), respectively. The CSPEMI606/608 has component values of 15 pF – 100 Ω – 15 pF. These devices include ESD protection diodes on every pin, which provide a very high level of protection for sensitive electronic components that may be subjected to electrostatic discharge (ESD). The ESD diodes connected to the filter ports are designed and characterized to safely dissipate ESD strikes of ± 15 kV, beyond the maximum requirement of the IEC 61000-4-2 international standard. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the pins are protected for contact discharges at greater than ± 30 kV.

These devices are particularly well suited for portable electronics (e.g. wireless handsets, PDAs, notebook computers) because of their small package format and easy-to-use pin assignments. They are ideal for EMI filtering and protecting data lines from ESD for the LCD display in clamshell handsets. The CSPEMI606 and CSPEMI608 are available in space-saving, low-profile chip-scale packages.

1. T_A = 25°C unless otherwise specified.
2. ESD applied to input and output pins with respect to GND, one at a time.
3. Clamping voltage is measured at the opposite side of the EMI filter to the ESD pin. For example, if ESD is applied to Pin A1, then clamping voltage is measured at Pin C1.
4. Unused pins are left open.
