MC10EL32, MC100EL32

SOIC-8 NB
D SUFFIX
CASE 751-07

Description

The MC10EL/100EL32 is an integrated ÷2 divider. The differential clock inputs and the V_{BB} allow a differential, single-ended or AC coupled interface to the device. The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a 0.01 μ F capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open.

The reset pin is asynchronous and is asserted on the rising edge. Upon power-up, the internal flip-flop will attain a random state; the reset allows for the synchronization of multiple EL32's in a system.

The 100 Series contains temperature compensation.
