

3.3 V AnyLevel™ Receiver to CML Driver/Translator with Input Hysteresis

2.0 GHz Clock / 2.5 Gb/s Data

NB4N316M

The NB4N316M is a differential Clock or Data receiver and will accept AnyLevel input signals: LVPECL, CML, LVCMOS, LVTTTL, or LVDS. These signals will be translated to CML, operating up to 2.0 GHz or 2.5 Gb/s, respectively. As such, the NB4N316M is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock or Data distribution applications. The CML outputs are 16 mA open collector (see Figure 18) which requires resistor (R_L) load path to V_{TT} termination voltage (see Figure 19). The open collector CML outputs must be terminated to V_{TT} at power up. The differential outputs produce Current-Mode Logic (CML) compatible levels when the receiver is loaded with 50 Ω or 25 Ω loads connected to 1.8 V, 2.5 V or 3.3 V supplies. This simplifies device interface by eliminating a need for coupling capacitors.

The NB4N316M features an input threshold hysteresis of approximately 25 mV, providing increased noise immunity and stability.

The device is offered in a small 8-pin TSSOP package (MSOP-8 compatible). Application notes, models, and support documentation are available at www.onsemi.com.
