

# NCS2220A

## Low Voltage Comparator

The NCS2220A is an industry first sub-one volt, low power dual comparator. This device consumes only 0.85  $\mu\text{A}$  per Comparator of supply current. It is guaranteed to operate at a low voltage of 0.85 V which allows it to be used in systems that require less than 1.0 V and is fully operational up to 6.0 V. Additional features include no output phase inversion with overdriven inputs, internal hysteresis, which allows for clean output switching, and rail-to-rail input and output performance. The NCS2220A is available in the tiny UDFN 1.6 X 1.6 package.

### Features

- Operating Voltage of 0.85 V to 6.0 V
- Rail-to-Rail Input/Output Performance
- Low Supply Current of 7.5  $\mu\text{A}$  per Comparator Typ
- No Phase Inversion with Overdriven Input Signals
- Internal Hysteresis
- Propagation Delay of 0.5  $\mu\text{s}$
- These are Pb-Free Devices

### Typical Applications

- Single Cell NiCd/NiMH Battery Powered Applications
- Cellular Telephones
- Alarm and Security Systems
- Personal Digital Assistants

## MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Supply Voltage Range ( $V_{CC}$ to $V_{EE}$ )	$V_S$	6.0	V
Non-inverting/Inverting Input to $V_{EE}$	–	–0.2 to ( $V_{CC} + 0.2$ )	V
Operating Junction Temperature	$T_J$	150	°C
Operating Ambient Temperature	$T_A$	–40 to +105	°C
Storage Temperature Range	$T_{stg}$	–65 to +150	°C
Output Short Circuit Duration Time (Note 1)	$t_S$	Indefinite	s
ESD Tolerance (Note 2) Human Body Model Machine Model	–	2000 200	V
Thermal Resistance, Junction-to-Ambient UDFN	$R_{\theta JA}$	350	°C/W

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. The maximum package power dissipation limit must not be exceeded.

$$P_D = \frac{T_{J(max)} - T_A}{R_{\theta JA}}$$

2. ESD data available upon request.

## OPERATING DESCRIPTION

The NCS2220A is an industry first sub-one volt, low power comparator. This device is designed for rail-to-rail input and output performance. This device consumes only  $7.5 \mu\text{A}$ /Comparator of supply current while achieving a typical propagation delay of  $0.5 \mu\text{s}$  at a  $20 \text{ mV}$  input overdrive. Figures 10 and 11 show propagation delay with various input overdrives. This comparator is guaranteed to operate at a low voltage of  $0.85 \text{ V}$  up to  $6.0 \text{ V}$ . This is accomplished by the use of a modified analog CMOS process that implements depletion MOSFET devices. The common-mode input voltage range extends  $0.1 \text{ V}$  beyond

the upper and lower rail without phase inversion or other adverse effects. This device has a typical internal hysteresis of  $\pm 8.0 \text{ mV}$ . This allows for greater noise immunity and clean output switching.

## Output Stage

The NCS2220A has a complementary P and N Channel output stage that has capability of driving a rail-to-rail output swing with a load ranging up to  $5.0 \text{ mA}$ . It is designed such that shoot-through current is minimized while switching. This feature eliminates the need for bypass capacitors under most circumstances.

**Figure 14. NCS2220A Complementary Output Configuration**

## NCS2220A

The oscillation frequency can be programmed as follows:

$$f = \frac{1}{T} = \frac{1}{2.2 R_x C_x}$$

**Figure 15. Schmitt Trigger Oscillator**

The resistor divider  $R_1$  and  $R_2$  can be used to set the magnitude of the input pulse. The pulse width is set by adjusting  $C_1$  and  $R_3$ .

**Figure 16. One-Shot Multivibrator**

## NCS2220A

This circuit converts 5 V logic to 3 V logic. Using the NCS2220/A allows for full 5 V logic swing without creating overvoltage on the 3 V logic input.
