Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- The entire application environment impacts the thermal resistance values shown, they are not constants and are only valid for the particular conditions noted.
- Repetitive rating, limited by max junction temperature.
- The maximum current rating is based on typical $R_{DS(on)}$ performance.
- E_{AS} of 800 mJ is based on starting $T_J = 25^\circ\text{C}$; $L = 1\text{ mH}$, $I_{AS} = 40\text{ A}$, $V_{DD} = 100\text{ V}$, $V_{GS} = 18\text{ V}$.
- E_{ON}/E_{OFF} result is with body diode.
- Defined by design, not subject to production test.
