NB3N1900K Evaluation Board User's Manual

ON Semiconductor®

<http://onsemi.com>

EVAL BOARD USER'S MANUAL

Introduction

The NB3N1900KMNGEVB evaluation boards were developed for the NB3N1900K (HCSL) devices. This evaluation board was designed to provide a flexible and convenient platform to quickly evaluate, characterize and verify the operation of the NB3N1900K devices.

This evaluation board manual contains:

- Information on the NB3N1900K Evaluation Board
- Assembly Instructions
- Test and Measurement Setup Procedures
- Board Schematic and Bill of Materials

This manual should be used in conjunction with the device datasheet which contains full technical details on the device specifications and operation.

(Top View)

(Bottom View)

Figure 1. NB3N1900KMNGEVB Evaluation Board

BOARD FEATURES

Single Board Design/Layout

- Accommodates the Electrical Characterization of the NB3N1900K (HCSL Outputs)
- Incorporates On-board I²C/SMBus Interface Circuitry Powered from a USB Connection, Minimizing Cabling
- Convenient and Compact Board Layout
- 3.3 V Power Supply Device Operation
- Differential Inputs/Outputs Signals are Accessed via SMA Connectors or High Impedance Probes

Other Board Features

There are no vias on the high-speed differential I/O metal traces so as to eliminate via impedance and stub affects. Board stand-offs are installed.

Board Layout

The NB3N1900K QFN-72 Evaluation Board provides a high bandwidth, 50-Ω controlled trace impedance environment (100-Ω line-to-line differential) and is implemented in four layers.

- All Layers are Constructed with FR4 Dielectric Material
- The First Layer is the Primary Signal Layer, Including All of the Differential Inputs and Outputs
- The Second Layer is the Ground Plane. It is Dedicated for the DUT Ground/SMA Ground Plane
- The Third Layer is Dedicated as the Power Plane. A Portion of this 3rd Layer is Designated for the Device VDD and VDDIO Power Planes
- The Fourth Layer Contains Control Lines, Power Supply Banana Jacks and Device Power Pin By-pass Capacitors

Layer Stack

- L1 (Top) Signal
- L2 Device Ground and SMA Ground
- L3 VDD, VDDIO (Separate Device Power Supplies)
- L4 (Bottom), Power Supply By-pass Capacitors, Control Pin Traces and Banana Jacks

4-LAYER STACK-UP

Figure 2. NB3N1900KMNGEVB Evaluation Board Layer Stack-Up

Power Supplies

Each VDD, VDDIO and GND power supply has a separate side-launch banana jack located on bottom side.

This board is capable of measuring device IDD & IDDIO separately.

Board Layer #2 = SMA Ground = Device GND = 0 V.

GND Banana Jack = negative power supply for DUTGND and SMAGND.

Exposed Pad (EP): The exposed pad footprint on the board is soldered to the exposed pad of the QFN-72 package, and is electrically connected to GND power supply.

Board Layer #3 = VDD and VDDIO Power Supplies

VDD = positive power supply for core and inputs; VDD/VDDA/VDDR (pins #1, 8)

VDDIO = positive power supply for outputs; VDDIO (pins #21, 31, 45, 58, 68)

VDD & VDDIO have the power supply filtering per datasheet by the banana jacks.

All VDD/VDDA/VDDR/VDDIO device pins have a 0.1 μF bypass capacitor installed on top side next to package pins.

NB3N1900KMNGEVB

Control Pins

Each control pin can be managed manually with a H/L jumper header; H = VDD, L = GND.

Tri-Level Input Pins – HBW_BYP_LBW#, SA_0 and SA_1

The three tri-level input pins, HBW_BYPASS_LBW#, SA0 and SA1, have selectable (with jumper) 4.7 k Ω pull-up to VDD and 4.7 k Ω pull-down to GND resistors; No jumper defaults to open/float.

- For a HIGH Level – Put Jumper to High
- For a LOW Level – Put Jumper to Low
- For a MID Level – Put Jumper to both High and Low; this will Enable both Pull-up and Pull-down Resistors

HBW_BYP_LBW#

At J16 header, there is a 4.7 k Ω pull-up to VDD and a 4.7 k Ω pull-down resistor to GND for manual control.

Figure 3. HBW_BYP_LBW# Schematic Configuration

SA_0 & SA_1

At J21 and J23 headers, there are 4.7 k Ω pull-ups to VDD and 4.7 k Ω pull-down resistors to GND for manual control.

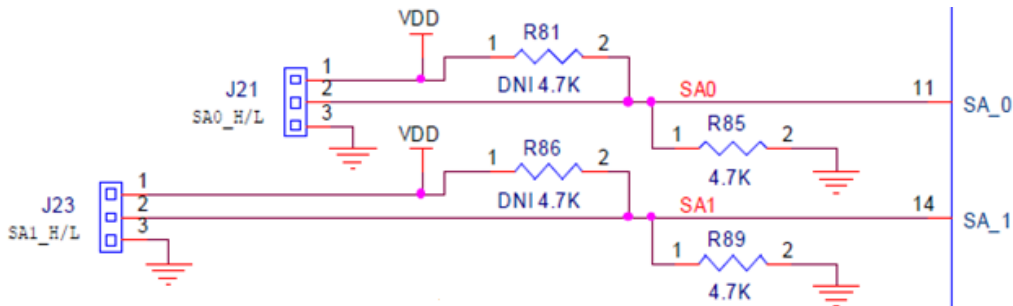

Figure 4. SA_0 & SA_1 Schematic Configuration

OE_n# Pins (Output Enable/Disable Function)

Four of the eight differential outputs can be controlled manually using the convenient High/Low OE_n# jumpers. See Figure 5.

All eight of the OE_n#s can be controlled individually/ automatically by using the software GUI. GUI control is accomplished via the USB. See Figure 5.

NB3N1900KMNGEVB

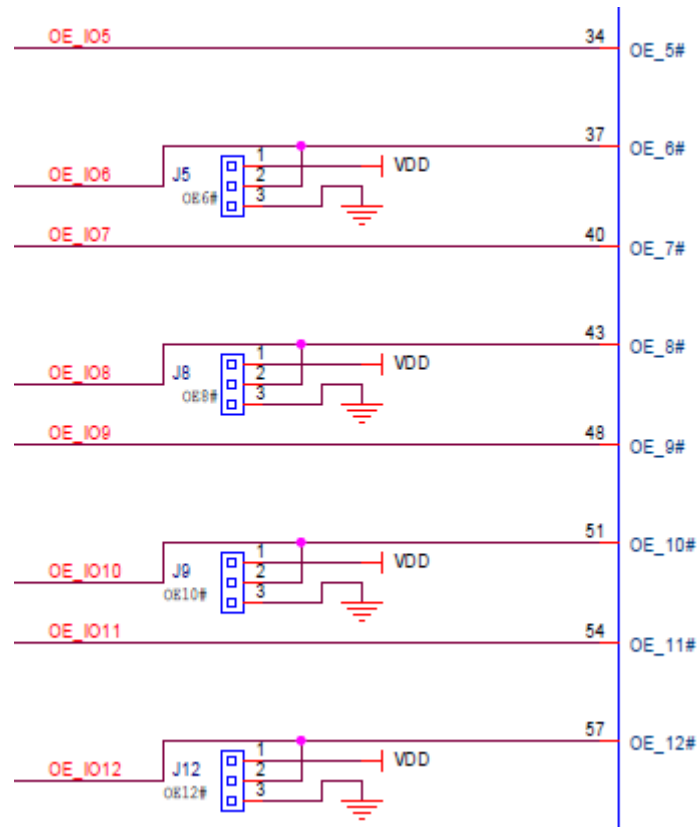

Figure 5. OE_n# Pins Schematic Configuration

100M_133M# – Frequency Selection (J18)

The 100M_133M# frequency selection pin can be controlled manually with the High/Low header jumper J18, H = 100 MHz, L = 133 MHz.

Figure 6. 100M_133M# Pin Schematic Configuration

PWRGD/PWRDN# (J19)

The PWRGD/PWRDN# pin can be controlled manually with the High/Low header jumper J19; H = PWRGD, L = PWRDN#.

Figure 7. PWRGD/PWRDN# Pin Schematic Configuration

Differential Clock Inputs and Outputs

CLK_IN & CLK_IN# – Differential Clock Inputs

The differential Clock input traces, CLK_IN/CLK_IN#, are equal length routed straight from the SMA connectors on the left side directly to the DUT; there are no vias on metal traces.

CLK_IN & CLK_IN# have resistor pads (R63 & R64) to GND to terminate a signal generator, if used. 50-Ω resistors are installed. **Remove these resistors** if CLK_IN & CLK_IN# are driven by another IC device.

DIF_n and DIF_n# – Differential Outputs

NB3N1900KMNGEVB were designed to measure the differential HCSL outputs with a 50-Ω scope head or high-impedance FET probe. (See Output Schematic in Figure 8)

Six of the nineteen differential outputs are designed to have equal length metal traces from the device pins to the SMA connectors.

The other thirteen differential outputs have shortened metal traces, do not have SMA connectors and can be observed with a high-impedance probe on the metal pads provided.

Each DIF_n/DIF_n# output has a provision for C_{Load}; 2 pF capacitors are installed on all outputs.

R_S & R_P pads are located close to the DUT. R_S = 33-Ω is installed for the NB3N1900K.

NB3N1900K (HCSL Outputs): R_P can be uninstalled on the six output pair with long metal traces to SMA connectors; Use 50-Ω to GND of the oscilloscope head for R_P.

R_P is installed (50-Ω to GND) on the short metal traces without SMA connectors and will use Hi-Z probes.

Table 1. NB3N1900KMNGEVB OUTPUT LOAD AND TERMINATION VS. OSCILLOSCOPE MEASUREMENT

Device	Output Traces	R _S	R _P	C _{Load}	Scope
1900K	Long (1.5")	33-Ω	Open (DNI) or 50-Ω	2 pF	50-Ω or Hi-Z
1900K	Short	33-Ω	50-Ω	2 pF	Hi-Z

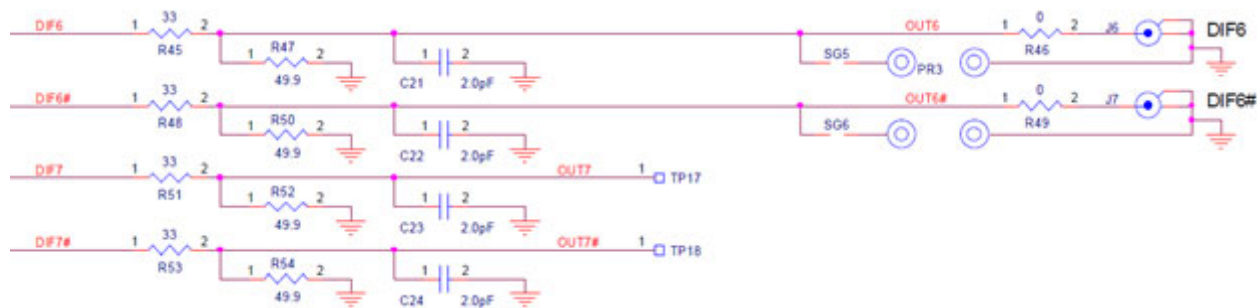

Figure 8. Differential Outputs Schematic Configuration: Long (OUT6) vs. Short (OUT7) Metal Traces

HCSL Output Measurement

HCSL outputs are typically terminated with 50-Ω to ground. Measuring HCSL outputs can be easily accomplished by:

NB3N1900K (HCSL Outputs) – 50-Ω Oscilloscope Head

With R_P removed from board, connect the HCSL outputs through the SMA connectors to the 50-Ω internal impedance of the oscilloscope sampling head.

NB3N1900K (HCSL Outputs) – Use Hi-Z Probe

With R_P installed, use a high-impedance probe on the output's metal trace. Holes for headers to connect to Hi-Z probes are available, but the header pins are not installed.

- Single-ended Hi-Z Probes or,
- Differential Hi-Z Probe;

Misc. Pins

FB_OUT & FB_OUT# – External Termination of Feedback Pins

FB_OUT & FB_OUT# have convenient “test point anvils” to monitor these pins with Hi-Z probe.

NB3N1900K (HCSL): Since the FB_OUT & FB_OUT# pins do not drive transmission lines (no SMAs), the board layout has these pins loaded/terminated at the DUT per datasheet; 83-Ω to GND is installed for the 100-Ω board.

IREF Pin

NB3N1900K (HCSL): The R_{REF} resistor (R99) to GND is for the HCSL output part device.

R_{REF} = 475-Ω is installed for the 100-Ω board.

Graphical User Interface (GUI)

USB & I²C/SMBus Interface

The NB3N1900K EVB has an on-board I²C/SMBus interface circuitry located in the upper left section of the board.

This circuitry will interface with the software program and the device via the SDA and SCL input pins, and can control all twelve of the OE_n# pins, PLL Mode and Frequency Select directly from the GUI.

SCL & SDA

The SMBus Clock (SCL) and Data (SDA) pins are exercised through the on-board I²C interface.

In order to enable the I²C control of the DUT, header jumpers J27 & J28 must be shorted.

The I²C/SMBus interface circuitry is powered separately from the USB type-B connection and is isolated from device VDD and VDDIO.

The SDA and SCL pins can also be externally accessed by an off-board programmer, allowing other SMBus emulators to be used to program the DUT. If used, remove both jumpers J27 & J28. “Test-point anvils” TP33 & TP34 are available for external control of the device with the use with mini-grabber cables.

NB3N1900KMNGEVB

QUICK START LAB SET-UP USER'S GUIDE

Pre-Power-Up

1. Connect power supply cables to VDD, VDDIO and GND banana jacks; (do not turn power on, yet).
2. Connect a signal generator to the SMA connectors for the CLK_IN & CLK_IN# inputs.
3. 50- Ω termination resistors are installed for a signal generator on the board. Set appropriate input signal levels; (HCSL input, $V_{IL} = 0\text{ V}$, $V_{IH} = 700\text{ mV}$, Frequency 100.00 or 133.33 MHz).
4. Ensure the PWRGD/PWRDN# pin is in the Low state before power up (PWRDN#). There is a jumper on pin 6 to easily select between High and Low. See Figure 7.
5. The 100M_133M# and HBW_BYB_LBW pins need to be hardware selected with jumpers. See Figures 3 and 6.
6. Connect the DIF_n/DIF_n# outputs to the appropriate oscilloscope.

Table 2. POWER SUPPLY CONNECTIONS

Device Pin Power Supply Connector	Power Supply
VDD, VDDIO	VCC = +3.3 V
GND	0 V

Figure 9. Power Supply Connections

Figure 10. Typical Lab Test Set-Up

Power-Up Sequence

1. Turn on power supply, 3.3 V (VDD & VDDIO)
2. Move PWRGD/PWRDN# jumper from Low to logic High, PWRGD position
3. Turn on the Differential Clock Signal for the CLK_IN inputs
4. Monitor DIF_n/DIF_n# outputs on oscilloscope

Optional

Graphical User Interface

There is a stand-alone Graphical User Interface software package and user's manual that will interface with the DUT via the USB connector.

1. Connect the USB port on the evaluation board to a USB port on the PC via cable.
2. See the stand-alone GUI instructions document.
3. Allow Windows to install the necessary drivers for the eval board USB interface hardware.
4. Start the GUI program.

This literature is subject to all applicable copyright laws and is not for resale in any manner.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and will only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

THE BOARD IS PROVIDED BY ONSEMI TO YOU "AS IS" AND WITHOUT ANY REPRESENTATIONS OR WARRANTIES WHATSOEVER. WITHOUT LIMITING THE FOREGOING, ONSEMI (AND ITS LICENSORS/SUPPLIERS) HEREBY DISCLAIMS ANY AND ALL REPRESENTATIONS AND WARRANTIES IN RELATION TO THE BOARD, ANY MODIFICATIONS, OR THIS AGREEMENT, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING WITHOUT LIMITATION ANY AND ALL REPRESENTATIONS AND WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, AND THOSE ARISING FROM A COURSE OF DEALING, TRADE USAGE, TRADE CUSTOM OR TRADE PRACTICE.

onsemi reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by **onsemi** shall not constitute any representation or warranty by **onsemi**, and no additional obligations or liabilities shall arise from **onsemi** having provided such information or services.

onsemi products including the boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. You agree to indemnify, defend and hold harmless **onsemi**, its directors, officers, employees, representatives, agents, subsidiaries, affiliates, distributors, and assigns, against any and all liabilities, losses, costs, damages, judgments, and expenses, arising out of any claim, demand, investigation, lawsuit, regulatory action or cause of action arising out of or associated with any unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of any products and/or the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by **onsemi** to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

onsemi does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: **onsemi** shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if **onsemi** is advised of the possibility of such damages. In no event shall **onsemi**'s aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.

The board is provided to you subject to the license and other terms per **onsemi**'s standard terms and conditions of sale. For more information and documentation, please visit www.onsemi.com.
