onsemi and ONSEMI. and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "onsemi" or its affiliates and/or subsidiaries in the United States and/or other countries. onsemi owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of onsemi product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. onsemi reserves the right to make changes at any time to any products or information herein is provided "as-is" and onsemi makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does onsemi assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using onsemi products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by onsemi. "Typical" parameters which may be provided in onsemi data sheets and/ or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. onsemi does not convey any license under any of its intellectual property rights nor the rights of others. onsemi products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use onsemi products for any such unintended or unauthorized application,

ON Semiconductor®

FDC6320C

Dual N & P Channel, Digital FET

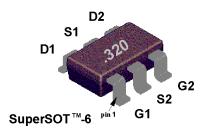

General Description

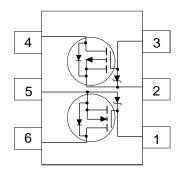

These dual N & P Channel logic level enhancement mode field effect transistors are produced using ON Semiconductor's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance. The device is an improved design especially for low voltage applications as a replacement for bipolar digital transistors in load switching applications. Since bias resistors are not required, this dual digital FET can replace several digital transistors with difference bias resistors.

Features

- N-Ch 25 V, 0.22 A, $R_{DS(ON)} = 5 \Omega @ V_{GS} = 2.7 V$.
- P-Ch 25 V, -0.12 A, $R_{DS(ON)} = 13 \Omega @ V_{GS} = -2.7 V$.
- Very low level gate drive requirements allowing direct operation in 3 V circuits. V_{CS(th)} < 1.5 V.
- Gate-Source Zener for ESD ruggedness.>6kV Human Body Model
- Replace NPN & PNP digital transistors.

Absolute Maximum Ratings $T_A = 25^{\circ}C$ unless other wise noted

Symbol	Parameter		N-Channel	P-Channel	Units

Notes:

Typical $R_{_{\theta^{\mathrm{JA}}}}$ using the board layouts shown below on FR-4 PCB in a still air environment:

a. 140°C/W on a 0.125 in² pad of 2oz copper.

b. 180°C/W on a 0.005 in² of pad of 2oz copper.

Scale 1 : 1 on letter size paper

2. Pulse Test: Pulse Width \leq 300µs, Duty Cycle \leq 2.0%.

^{1.} $R_{g,A}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{g,C}$ is guaranteed by design while $R_{g,CA}$ is determined by the user's board design.
