

Motion SPM[®] 5 Series

FSB50550BB

General Description

The FSB50550BB is an advanced Motion SPM 5 module providing a fully-featured, high-performance inverter output stage for AC Induction, BLDC and PMSM motors. These modules integrate optimized gate drive of the built-in MOSFETs (FRFET[®] technology) to minimize EMI and losses, while also providing multiple on-module protection features including under-voltage lockouts and thermal monitoring. The built-in high-speed HVIC requires only a single supply voltage and translates the incoming logic-level gate inputs to the high-voltage, high-current drive signals required to properly drive the module's internal MOSFETs. Separate open-source MOSFET terminals are available for each phase to support the widest variety of control algorithms.

Features

- Gate Driver Resistance $R_{ON} = 4.5 \text{ k}\Omega$, $R_{OFF} = 1.2 \text{ k}\Omega$
- Optimized for over 10 kHz Switching Frequency
- 500 V FRFET MOSFET 3-Phase Inverter with Gate Drivers and Protection
- Built-In Bootstrap Diodes Simplify PCB Layout
- Separate Open-Source Pins from Low-Side MOSFETs for Three-Phase Current-Sensing
- Active-HIGH Interface, Works with 3.3/5 V Logic, Schmitt-Trigger Input
- Optimized for Low Electromagnetic Interference
- HVIC Temperature-Sensing Built-In for Temperature Monitoring
- HVIC for Gate Driving and Under-Voltage Protection
- Isolation Rating: 1500 V_{rms}/min .
- This Device is Pb-Free and is RoHS Compliant

Applications

- 3-Phase Inverter Driver for Small Power AC Motor Drives

RECOMMENDED OPERATING CONDITION

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Unit
V_{PN}	Supply Voltage	Applied between P and N	–	300	400	V
V_{DD}	Control Supply Voltage	Applied between V_{DD} and COM	13.5	15.0	18.5	V
V_{BS}	High-Side Bias Voltage	Applied between V_B and V_S	13.5	15.0	18.5	V
$V_{IN(ON)}$	Input ON Threshold Voltage	Applied between V_{IN} and COM	3.0	–	V_{DD}	V
$V_{IN(OFF)}$	Input OFF Threshold Voltage		0	–	0.6	V
t_{dead}	Blanking Time for Preventing Arm-Short	$V_{DD} = V_{BS} = 13.5\sim 16.5$ V, $T_J \leq 150^\circ\text{C}$	2	–	–	μs
		$V_{DD} = V_{BS} = 12.3\sim 14.4$ V, $T_J \leq 150^\circ\text{C}$	1	–	–	μs
f_{PWM}	PWM Switching Frequency	$T_J \leq 150^\circ\text{C}$	–	15	–	kHz

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

Figure 2. Built in Bootstrap Diode Characteristics (Typical)

NOTES:

- BV_{DSS} is the absolute maximum voltage rating between drain and source terminal of each MOSFET inside Motion SPM 5 product. V_{PN} should be sufficiently less than this value considering the effect of the stray inductance so that V_{PN} should not exceed BV_{DSS} in any case.
- t_{ON} and t_{OFF} include the propagation delay of the internal drive IC. Listed values are measured at the laboratory test condition, and they can be different according to the field applications due to the effect of different printed circuit boards and wirings. Please see Figure 6 for the switching time definition with the switching test circuit of Figure 7.
- The peak current and voltage of each MOSFET during the switching operation should be included in the Safe Operating Area (SOA). Please see Figure 7 for the RBSOA test circuit that is same as the switching test circuit.
- V_{IS} is only for sensing-temperature of module and cannot shutdown MOSFETs automatically.
- Built in bootstrap diode includes around $15\ \Omega$ resistance characteristic. Please refer to Figure 2.

FSB50550BB

Figure 3. Recommended MCU Interface and Bootstrap Circuit with Parameters

NOTES:

9. Parameters for bootstrap circuit elements are dependent on PWM algorithm. For 15 kHz of switching frequency, typical example of parameters is shown above.
10. RC-coupling (R₅ and C₅) and C₄ at each input of Motion SPM and MCU (Indicated as Dotted Lines) may be used to prevent improper signal due to surge-noise.
11. Bold lines should be short and thick in PCB pattern to have small stray inductance of circuit, which results in the reduction of surge-voltage. Bypass capacitors such as C₁, C₂ and C₃ should have good high-frequency characteristics to absorb high-frequency ripple-current.

Figure 4. Case Temperature Measurement

NOTE:

12. Attach the thermocouple on top of the heat-sink of SPM 5 package (between SPM 5 package and heatsink if applied) to get the correct temperature measurement.

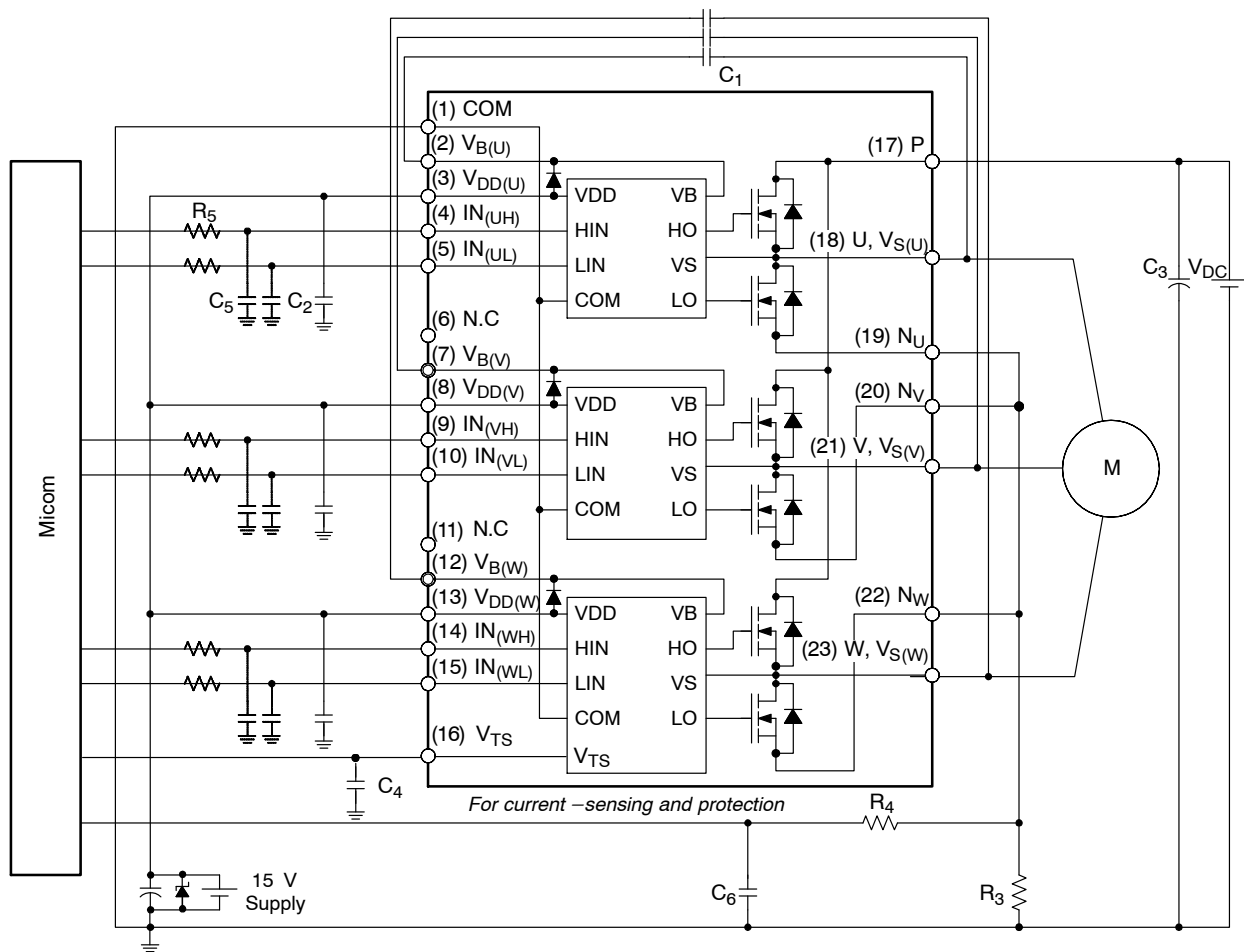

Figure 10. Example of Application Circuit

NOTES:

13. About pin position, refer to Figure 1.
14. RC-coupling (R_5 and C_5 , R_4 and C_6) and C_4 at each input of Motion SPM 5 product and MCU are useful to prevent improper input signal caused by surge-noise.
15. The voltage-drop across R_3 affects the low-side switching performance and the bootstrap characteristics since it is placed between COM and the source terminal of the low-side MOSFET. For this reason, the voltage drop across R_3 should be less than 1 V in the steady-state.
16. Ground-wires and output terminals, should be thick and short in order to avoid surge-voltage and malfunction of HVIC.
17. All the filter capacitors should be connected close to Motion SPM 5 product, and they should have good characteristics for rejecting high-frequency ripple current.
