

-3.3 V / -5 V Triple ECL Input to LVPECL Output Translator

MC100LVEL90

Description

The MC100LVEL90 is a triple ECL to LVPECL translator. The device receives either -3.3 V or -5 V differential ECL signals, determined by the V_{EE} supply level, and translates them to +3.3 V differential LVPECL output signals.

To accomplish the level translation, the LVEL90 requires three power rails. The V_{CC} supply should be connected to the positive supply, and the V_{EE} pin should be connected to the negative power supply. The GND pins, as expected, are connected to the system ground plane. Both V_{EE} and V_{CC} should be bypassed to ground via 0.01 μ F capacitors.

Under open input conditions, the \bar{D} input will be biased at $V_{EE}/2$ and the D input will be pulled to V_{EE} . This condition will force the Q output to a LOW, ensuring stability.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a 0.01 μ F capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open.

Features

- 500 ps Propagation Delays
- ESD Protection: > 2 kV HBM, > 200 V MM
- The 100 Series Contains Temperature Compensation
- Operating Range: $V_{CC} = 3.0$ V to 3.8 V;
 $V_{EE} = -3.0$ V to -5.5 V; GND = 0 V
- Internal Input Pulldown Resistors
- Q Output will Default LOW with Inputs Open or at V_{EE}
- Meets or Exceeds JEDEC Spec EIA/JESD78 IC Latchup Test
- Moisture Sensitivity: Level 3 (Pb-Free)
For Additional Information, see Application Note [AND8003/D](#)
- Flammability Rating: UL 94 V-0 @ 0.125 in,
Oxygen Index: 28 to 34
- Transistor Count = 261 devices
- These Devices are Pb-Free, Halogen Free and are RoHS Compliant

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm.

1. Input parameters vary 1:1 with GND. V_{EE} can vary -3.0 V to -5.5 V.
2. V_{IHCMR} min varies 1:1 with V_{EE} . V_{IHCMR} max varies 1:1 with GND.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm.

5. Skews are valid across specified voltage range, part-to-part skew is for a given temperature.

6. Duty cycle skew is the difference between a TPLH and TPHL propagation delay through a device.

7. V_{PP} (min) is swing measured single-ended on each input in differential configuration. The device has a DC gain of ≈ 40 .
