

Low-Voltage CMOS Quad 2-Input Multiplexer

With 5 V-Tolerant Inputs (Non-Inverting)

MC74LCX157

The MC74LCX157 is a high performance, quad 2-input multiplexer operating from a 1.65 to 5.5 V supply. High impedance TTL compatible inputs significantly reduce current loading to input drivers while TTL compatible outputs offer improved switching noise performance. A $V_{\rm I}$ specification of 5.5 V allows MC74LCX157 inputs to be safely driven from 5 V devices.

Four bits of data from two sources can be selected using the Select and Enable inputs. The four outputs present the selected data in the true (non-inverted) form. The MC74LCX157 can also be used as a function generator. Current drive capability is 24 mA at the outputs at 3 V.

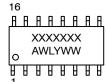

Features

- Designed for 1.65 to 5.5 V V_{CC} Operation
- 5 V Tolerant Inputs Interface Capability With 5 V TTL Logic
- LVTTL Compatible
