

Self Protected High Side Driver with Temperature Shutdown and Current Limit

NCV8460A

The NCV8460A is a fully protected High-Side driver that can be used to switch a wide variety of loads, such as bulbs, solenoids and other actuators. The device is internally protected from an overload condition by an active current limit and thermal shutdown.

A diagnostic output reports ON and OFF state open load conditions as well as thermal shutdown.

Features

- Short Circuit Protection
- Thermal Shutdown with Automatic Restart
- CMOS compatible control input
- Open Load Detection in On and Off State
- Diagnostic Output
- Undervoltage and Overvoltage Shutdown
- Loss of Ground Protection
- ESD protection
- Slew Rate Control for Low EMI Switching
- Very Low Standby Current
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC Qualified and PPAP Capable
- These Devices are Pb-Free and are RoHS Compliant

Typical Applications

- Switch a Variety of Resistive, Inductive and Capacitive Loads
- Can Replace Electromechanical Relays and Discrete Circuits
- Automotive / Industrial

PRODUCT SUMMARY

Parameter	Symbol	Value	Units
Operating Voltage Range	V_S	6 to 36	V
$R_{DS(on)(max)}$ $T_J = 25^\circ\text{C}$	R_{ON}	60	m Ω
Output Current Limit (min)	I_{lim}	6	A

7	OUT	Output
8	V _D	Supply Voltage

NCV8460A

MAXIMUM RATINGS

Rating	Symbol	Value		Unit
		Min	Max	
DC Supply Voltage	V_D	-0.3	41	V
Peak Transient Input Voltage (Load Dump 42.5 V, $V_D = 13.5$ V, $R_{LOAD} = 6.5$ Ω , ISO7637-2 pulse 5)	V_{peak}		56	V
Input Voltage	V_{in}	-8	8	V
Input Current	I_{in}	-5	5	mA
Output Current (Note 1)	I_{out}	-6	Internally Limited	A
Negative Ground Current	$-I_{gnd}$	-200	-	mA
Status Current	I_{status}	-5	5	mA
Power Dissipation, $T_A = 25^\circ\text{C}$	P_{tot}	1.183		W
Electrostatic Discharge (HBM Model 100 pF / 1500 Ω)				DC
Input		4		kV
Status		3.5		kV
Output		5		kV
V_D		5		kV
Single Pulse Inductive Load Switching Energy (Note 2) ($L = 1.8$ mH, $V_{bat} = 13.5$ V; $I_L = 9$ A, $T_{Jstart} = 150^\circ\text{C}$)	E_{AS}	100		mJ
Operating Junction Temperature	T_J	-40	+150	$^\circ\text{C}$
Storage Temperature	$T_{storage}$	-55	+150	$^\circ\text{C}$

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- Reverse Output current has to be limited by the load to stay within absolute maximum ratings and thermal performance.
- Not subjected to production testing.

THERMAL RESISTANCE RATINGS

Parameter	Symbol	Max Value	Unit
Thermal Resistance Junction-to-Lead	$R_{\theta JL}$	30	$^\circ\text{C/W}$
Junction-to-Ambient (min. Pad)	$R_{\theta JA}$	110.8	$^\circ\text{C/W}$
Junction-to-Ambient (1" square pad size, FR-4, 1 oz Cu)	$R_{\theta JA}$	105.6	$^\circ\text{C/W}$

Class	Functional Status
A	All functions of a device perform as designed during and after exposure to disturbance.
B	All functions of a device perform as designed during exposure. However, one or more of them can go beyond specified tolerance. All functions return automatically to within normal limits after exposure is removed. Memory functions shall remain class A.
C	One or more functions of a device do not perform as designed during exposure but return automatically to normal operation after exposure is removed.
D	One or more functions of a device do not perform as designed during exposure and do not return to normal operation until exposure is removed and the device is reset by simple
E	One or more functions of a device do not perform as designed during and after exposure and cannot be returned to proper operation without replacing the device.

NCV8460A

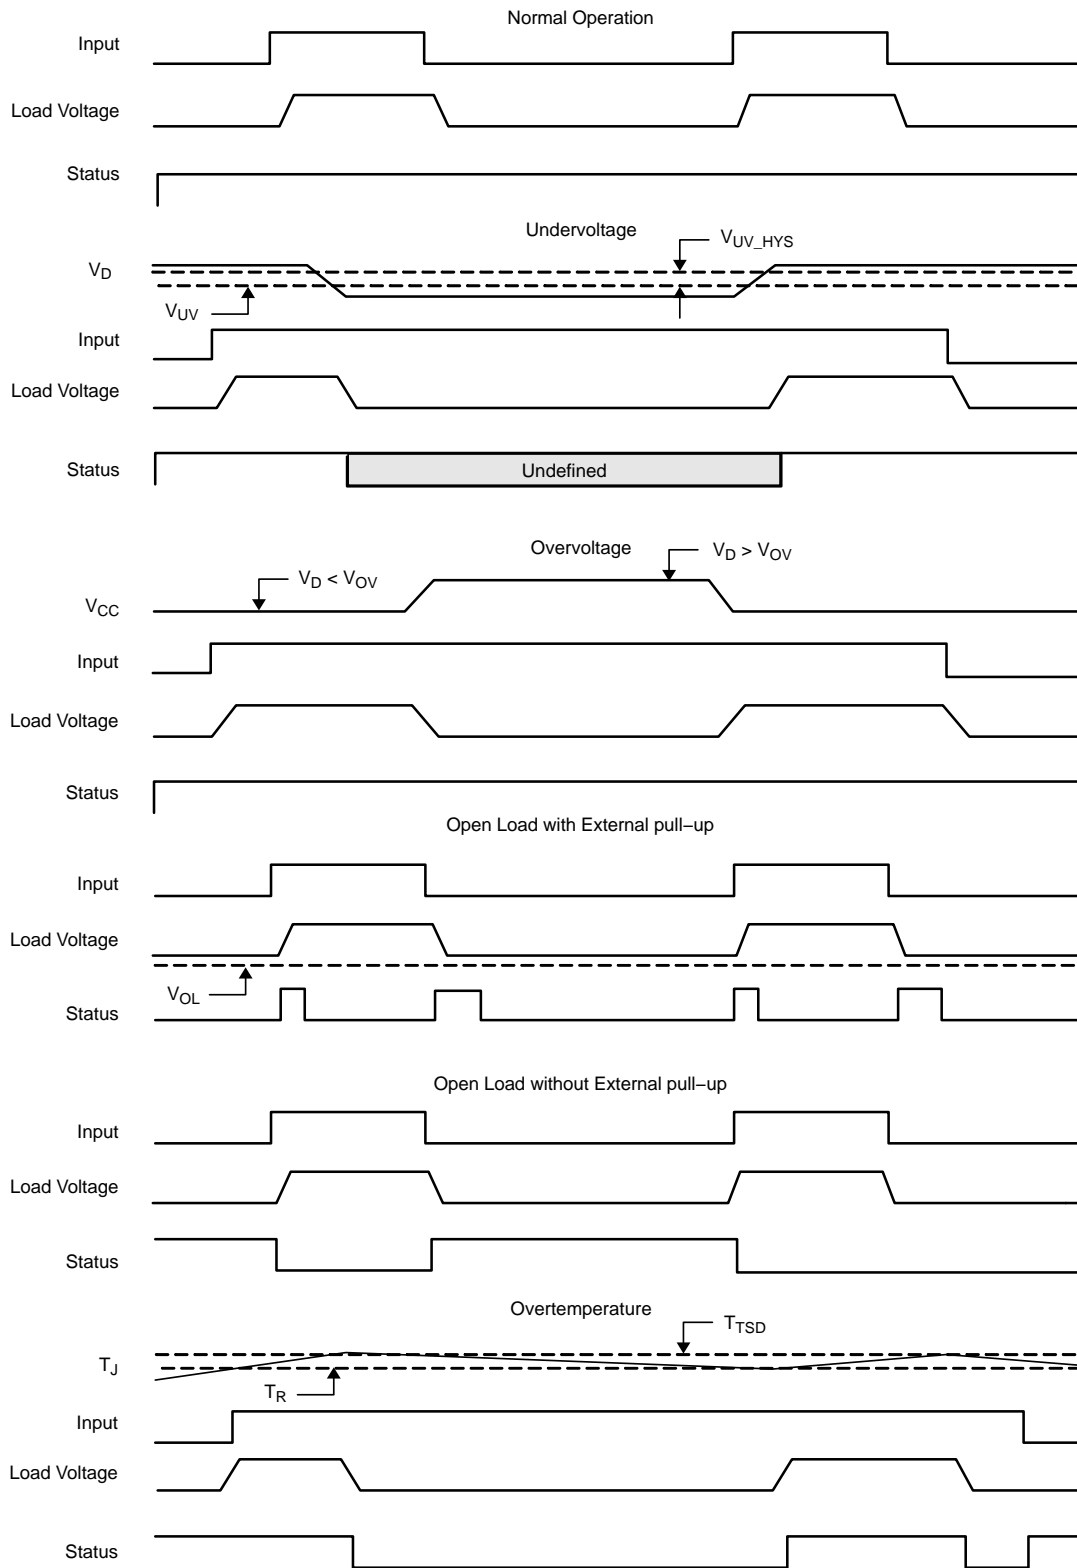

Figure 30. Waveforms

Figure 31. Application Diagram

Reverse Battery Protection

An external resistor R_{GND} is required to adequately protect the device from a Reverse Battery event. The resistor value can be calculated using the following two formulas.

1. $R_{GND} \leq 600 \text{ mV} / (I_d \text{ (on) max})$
2. $R_{GND} \geq (-V_D) / (-I_{gnd})$

Maximum $(-I_{gnd})$ current, which is the reverse GND pin current, can be found in the Maximum Ratings section. Several High Side Devices can share same the reverse battery protection resistor. Please note that the sum of $(I_d \text{ (on) max})$ of all devices should be used to calculate R_{GND} value. If the microprocessor ground is not common with the device ground, R_{GND} will produce a voltage offset $((I_d \text{ (on) max}) \times R_{GND})$ with respect to the IN and STAT pins.

This offset will be increased when more than one device shares the resistor.

Power Dissipation during a reverse battery event is equal to:

$$P_D = (-V_D)^2 / R_{GND}$$

In the case of high power dissipation due to several devices sharing R_{GND} , it is recommended to place a diode D_{GND} in the ground path as an alternate reverse battery protection method. When driving an inductive load, a 1 k Ω resistor should be placed in parallel with the D_{GND} diode. This method will also produce a voltage offset of ~600 mV with respect to the IN and STAT pins. This diode can also be shared amongst several High Side Devices. This voltage offset will vary if D_{GND} is shared by multiple devices.

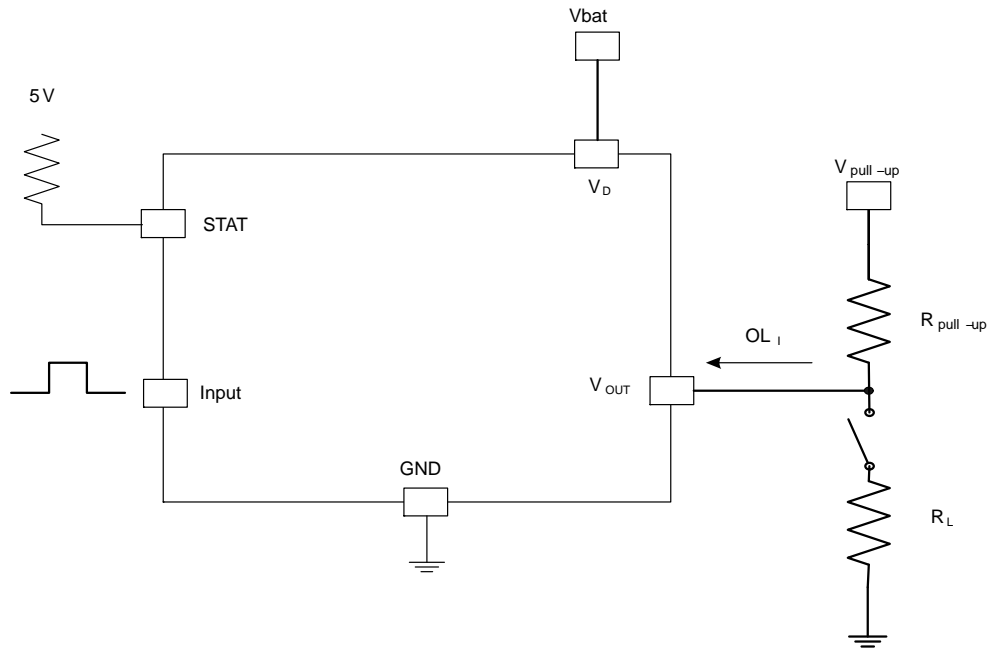

Figure 32. Open Load Detection In Off State

OFF State Open Load Detection

Off State Open Load Detection requires an external pull-up resistor ($R_{\text{pull-up}}$) connected between V_{OUT} pin and a positive supply voltage ($V_{\text{pull-up}}$).

The external $R_{\text{pull-up}}$ resistor value should be selected to ensure that a false OFF State OL condition is not detected when the load (R_L) is connected. A V_{OUT} voltage above the $V_{\text{OL_min}}$ (Openload Off State Detection Threshold) minimum value with the load (R_L) connected needs to be avoided. The following formula shows this relationship:

$$V_{\text{OUT}} = \left(V_{\text{pull-up}} / (R_L + R_{\text{pull-up}}) \right) R_L < V_{\text{OL_min}}$$

In addition to ensuring the selected $R_{\text{pull-up}}$ resistor value does not cause a false OFF State OL detection condition

when the load is connected, the $R_{\text{pull-up}}$ must also not cause the OFF State OL to miss detecting an OL condition when the load is disconnected. A V_{OUT} voltage below the $V_{\text{OL_max}}$ (Openload Off State Detection Threshold) maximum value with the load (R_L) disconnected needs to be avoided. The following formula shows this relationship:

$$R_{\text{pull-up}} < (V_{\text{pull-up}} - V_{\text{OL_max}}) / OL_1$$

$$OL_1 = I_L (\text{Output Leakage with } V_{\text{OUT}} = 3.5 \text{ V})$$

Because I_d (OFF) may significantly increase if V_{OUT} is pulled high (up to several mA), $R_{\text{pull-up}}$ resistor should be connected to a supply that is switched OFF when the module is in standby.

Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
