

Schottky Barrier Diodes

NSR1020MW2

This Schottky Barrier Diode in the SOD-323 package offers extremely low V_f performance. The low forward voltage makes them capable of handling high current in a very small package. The resulting device is ideally suited for application as a blocking diode in charging applications or as part of discrete buck converter or discrete boost converter. As part of a buck conversion circuit, a boost conversion circuit or a charging circuit the low V_f drop of the Schottky improves the efficiency of the overall device by consuming less power in the forward mode.

Features

- Low Forward Voltage - 0.24 Volts (Typ) @ $I_F = 10 \text{ mAdc}$
- High Current Capability
- ESD Rating - Human Body Model: CLASS 3B
- Machine Model: C
- NSVR Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q101 Qualified and PPAP Capable
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant
