

Product Overview

LV3327PV: Electronic Volume for Portable Sound Equipment or PND (Personal Navigation Device)

For complete documentation, see the data sheet.

The LV3327PV is electronic volume IC for the volume adjustment of the portable sound equipment usage.

Features

- The mixing function is installed, and it is suitable for PND (personal navigation device) as the usage. It is possible to output it by allocating one system in the audio guidance among four input systems, and mixing othersignals from the speaker output with the audio guidance by the microcomputer control.
- Because the volume step resolution is 0.5dB step, the volume can be made to fine-tune.
- The loudness function is installed.
