

ADT7463 Configurations

by Mary Burke

INTRODUCTION

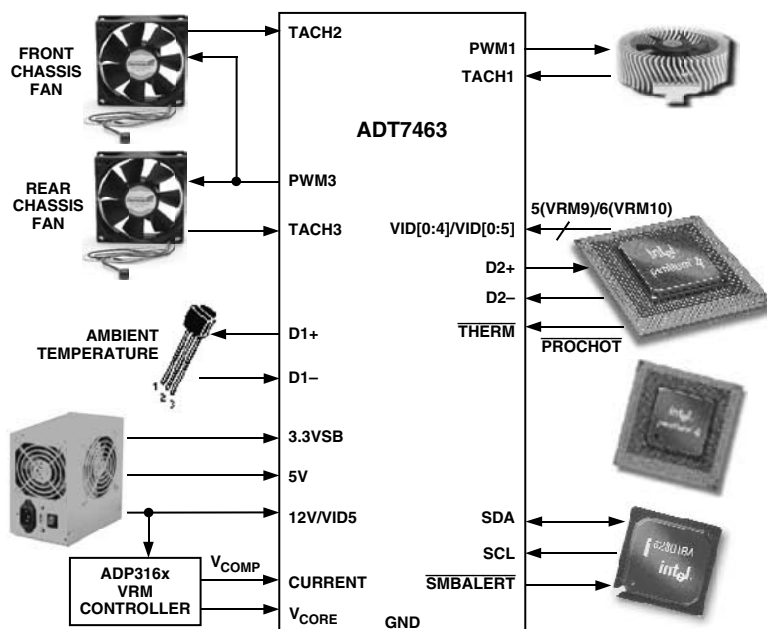

This document is intended as a supplement to the ADT7463 data sheet. Since many of the pins on the ADT7463 are multifunctional, there are many possible configurations of the ADT7463. The purpose of this document is to describe all the possible options and their configuration register settings.

RECOMMENDED IMPLEMENTATION

Configuring the ADT7463 as in Figure 2 provides the systems designer with the following features:

1. Six VID Inputs (VID0 to VID5) for VRM10 Support.
2. Two PWM Outputs for Fan Control of up to Three Fans (the front and rear chassis fans are connected in parallel).
3. Three TACH Fan Speed Measurement Inputs.

4. V_{CC} Measured Internally through Pin 4.
5. CPU Core Voltage Measurement (V_{CORE}).
6. 2.5 V Measurement Input Used to Monitor CPU Current (connected to V_{COMP} output of ADP316x VRM controller). This is used to determine CPU power consumption.
7. 5 V Measurement Input.
8. VRM temperature uses local temperature sensor.
9. CPU Temperature Measured Using Remote 1 Temperature Channel.
10. Ambient Temperature Measured through Remote 2 Temperature Channel.
11. If not using VID5, this pin can be reconfigured as the +12 V monitoring input.
12. Bidirectional \overline{THERM} Pin. Allows Intel® Pentium 4® PROCHOT monitoring and can function as an over-temperature \overline{THERM} output.
13. $\overline{SMBALERT}$ System Interrupt Output.
