

Type-C CC with High Speed Digital (HSD) Port Protection Switch

FUSB252

Description

The FUSB252 is an integrated port protection switch for USB Type-C® applications. This product will protect HSD+/- and CCx pins when stressed with voltages up to 20 V. Over-Voltage Protection (OVP) at 5.8 V typical will protect the system for Electrical Overstress (EOS) damage. With a fully integrated USB 2.0 switch for HSD+/-, this product can be easily integrated into existing solutions. The HSD switches can pass USB 2.0 signals with bandwidth 1 GHz to maintain signal integrity and eye compliance.

The CC switches have very low RON of 0.3 Ω to minimize signal attenuation. The FUSB252 also provides Dead Battery support per the Type-C specification. Additional features include Under-Voltage Lockout (UVLO) and thermal shutdown.

Features

- Fully Type-C Port Protection
- Supports USB Type-C Specification 1.2
- V_{CC} 0 V – 5.5 V
- 20 V DC Protection on V_{CC}
- 16 V DC Protection on HSD Port
- V_{DD} Operating Range, 2.7 V – 5.5 V
- Current Capability: 1 A
- CC R_{ON} : 0.3 Ω Typical
- HSD R_{ON} : 5 Ω Typical
- Wide –3 db Bandwidth: 1 GHz
- Low Power Operation: I_{CC} = 9 μ A Typical
- Dead Battery Support (UFP Support when No Power Applied)
- CC Over-Voltage Protection: Typical = 5.6 V
- This is a Pb-Free Device

Applications

- Smartphones
- Tablets
- Laptops

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter			Min	Max	Unit
V _{VDD}	Supply Voltage from V _{DD}			−0.5	12.0	V
V _{VICC}	V _{VICC} , to GND			−0.5	24	V
V _{SW}	V _{HSD±} , to GND			−5	16	V
V _{OCC} , V _{SW}	V _{OCC} , V _{HSD±} to GND			−0.5	6	V
V _{CONTROL}	DC Input Voltage (S, /OE)			−0.5	V _{VDD}	V
I _{CCSW}	DC CC Switch Current				1.25	A
I _{USBSW}	DC Output Current				100	mA
I _{IK}	DC Input Diode Current			−50		mA
T _{STORAGE}	Storage Temperature Range			−65	+150	°C
T _J	Maximum Junction Temperature				+150	°C
T _L	Lead Temperature (Soldering, 10 seconds)				+260	°C
ESD	IEC 61000-4-2 System ESD	Connector Pins (V _{VDD} , V _{VICC} , V _{HSD±})	Air Gap	15		kV
			Contact	8		
	IEC 61000-4-5 Surge ESD	V _{VICC} to GND		−24	24	V
		V _{HSD±} to GND		−16	16	V
	Human Body Model, JEDEC JESD22-A114	Power to GND		4		kV
		External Pins to GND (V _{HSD±} , V _{VICC})				
		System Side Pin (V _{HSD±} , V _{OCC} , S, /OE, FLAGB)		2		
	Charged Device Model, JEDEC LESD22-C101	All Pins		1		

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

RECOMMENDED OPERATING CONDITIONS

Symbol	Parameter	Min	Typ	Max	Unit
V _{VDD}	Supply Voltage	2.7	4.2	5.5	V
V _{VICC}	Type C Input Voltage	0		5.5	V
V _{OCC}	Type C Output Voltage	0		5.5	V
I _{CCSW}	Maximum CC Switch Current			1	A
V _{CNTRL}	Control Input Voltage (SEL, /OE)	−0.5		V _{VDD}	V
V _{SW}	HSD/USB Switch I/O Voltage	−0.5		4.5	V
T _A	Operating Temperature	−40		+85	°C

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

FUSB252

DC CHARACTERISTICS (Unless otherwise specified: Recommended T_A and T_J temperature ranges. All typical values are at $T_A = 25^\circ\text{C}$ and $V_{DD} = 4.2\text{ V}$ unless otherwise specified.)

Symbol	Characteristic	V_{DD} (V)	Conditions	$T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$ $T_J = -40^\circ\text{C}$ to $+125^\circ\text{C}$			Unit

FUSB252

OPERATION AND APPLICATION DESCRIPTION

Out of Spec Surge/Spike Voltage due to Hot Plug

The FUSB252 protects end systems against 20 V DC on the CC pin, in cases where the FUSB252 is tested to mimic a hot plug event, a fully charged cable connected to a power supply set to 20 V is used to zap the VICC pins of the device. In these cases, the inductance of the cable causes voltage spikes that are higher than the absolute maximum ratings of the of the VICC pins. These voltages can cause damage to the VOCC pins. This scenario does not occur in normal usage. The Type-C specification prevents the plug from having 20 V on VBUS from a PD source prior to a PD contract being completed. When the 20 V potential is on VBUS and shorted to the CC pin, it causes a detach and the voltage spikes are less likely to occur. The following reference circuit is required when the application calls for additional protection to protect against such event as hot plug.

Application Specific Schematic

- Place a 5 V to 6 V rated Zener TVS diode such as (CZRF52C5V6 or CD1005-Z5V1) on the VOCC pin, and a 5 Ω resistor to device ground to prevent the FUSB252 from being damaged during these tests. With this additional protection it is also important to select the right external VICC IEC TVS for the best overall performance.
- Without the additional protection the device by itself can withstand up to 9 V under the same hot plug condition.

Figure 6. Reference Schematic

Over-Voltage Protection

When over-voltage event is detected, device will activate OVP to shutdown the switch within t_{OVP} , as well as signal the FLAGB to indicate there is OV event to the system.

Fault Reporting

Upon the detection of an over-voltage event, the INTB/FLAGB signals the fault by activating LOW.
