NE5532, SA5532, SE5532, NE5532A, SE5532A

Internally Compensated Dual Low Noise Operational Amplifier

The 5532 is a dual high-performance low noise operational amplifier. Compared to most of the standard operational amplifiers, such as the 1458, it shows better noise performance, improved output drive capability and considerably higher small-signal and power bandwidths.

This makes the device especially suitable for application in high-quality and professional audio equipment, instrumentation and control circuits, and telephone channel amplifiers. The op amp is internally compensated for gains equal to one. If very low noise is of prime importance, it is recommended that the 5532A version be used because it has guaranteed noise voltage specifications.

Features
- Small-Signal Bandwidth: 10 MHz
- Output Drive Capability: 600 Ω, 10 V RMS
- Input Noise Voltage: 5.0 nV/√Hz (Typical)
- DC Voltage Gain: 50000
- AC Voltage Gain: 2200 at 10 kHz
- Power Bandwidth: 140 kHz
- Slew Rate: 9.0 V/µs
- Large Supply Voltage Range: ±3.0 to ±20 V
- Compensated for Unity Gain
- Pb-Free Packages are Available

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Diodes protect the inputs against overvoltage. Therefore, unless current-limiting resistors are used, large currents will flow if the differential input voltage exceeds 0.6 V. Maximum current should be limited to $\pm 10$ mA.

2. Diodes protect the inputs against overvoltage. Therefore, unless current-limiting resistors are used, large currents will flow if the differential input voltage exceeds 0.6 V. Maximum current should be limited to ±10 mA.
3. For operation at elevated temperature, derate packages based on the package thermal resistance.
4. Output may be shorted to ground at \( V_S = \pm 15\ \text{V}, T_\text{amb} = 25^\circ\text{C} \). Temperature and/or supply voltages must be limited to ensure dissipation rating is not exceeded.
