Fully-Configurable Port Companion for Displays

The NLPS591 is a fully-configurable port companion for display applications. The device supports 4 externally selectable modes: (1) 4-Ch autosensing logic level translator mode, (2) CRT mode, (3) HDMI mode and (4) DisplayPort (DP) mode. The device provides switchable power to the connected display and the level shifting necessary for the different display modes. It also provides high-level ESD protection on the connector side.

Features

- Modes supported:
 - ◆ 4-Ch Logic Level Translator (LT) Mode
 - CRT Mode
 - HDMI Mode
 - DisplayPort (DP) Mode
- Wide V_{CCA} Operating Range: 1.65 V to 5.5 V
- Wide V_{IN} Range: 3.0 to 5.5 V (Power Modes) 1.65 V to 5.5 V (Level Translator Mode)
- Low R_{DSON} Load Switch: 300 m Ω @ V_{IN} = 3.3 V
- Soft-start Control for Load Switch
- Protection Provided: Overcurrent, Overvoltage, Backdrive
- Power Consumption: < 10 mW with Load Switch On < 1 mW with Load Switch Off
- High Drive VESA-compliant Translator SYNC Level Translators in CRT Mode
- Integrated Pull-ups for the Autosensing Bidirectional Translators
- Low Input Capacitance for Translator Inputs: $C_{IN} < 10 \text{ pF}$
- Small, Space Saving Package
 - 1.8 mm x 2.6 mm WQFN16
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Typical Applications

- Laptops, Desktops
- Tablets, SmartPhones

Important Information

- ESD Protection for All Pins
 - ◆ Human Body Model (HBM) > 2000 V

0	1	DisplayPort – DP
1	0	HDMI
1	1	CRT

OPERATING MODES

Level Translator Mode – LT (Default Mode)

When MODE0 = 0 and MODE1 = 0, the NLPS591 enters level translator mode. In this mode, the power switch is always off.

When CH_EN = 1, the device is configured as an autosensing 4-channel bidirectional logic level translator.

The function diagram is shown below. The A-side I/Os are referred to VCCA (pin 6). The B-side I/Os are referred to either VCC_I2C_1_B (pin 1) or VCC_I2C_0_B (pin 2).

When CH_EN = 0, the 4-ch level translator is disabled, and the I/O pins (pins 7, 8, 9, 10, 11,12, 13, 14) go into high-impedance.

Figure 3. Function Diagram – LT Mode

A CA_DET_B input is provided to detect the use of an

HDMI dongle. When there is no HDMI dongle attached

 $(CA_DET_B = 0)$, the device goes into DP0 sub-mode, where AUX and AUX# signals are passed. The function

diagram is shown below.

DP Mode

When MODE0 = 0 and MODE1 = 1, the NLPS591 enters DP (DisplayPort) mode. The device is configured as a DP-compliant logic level translator for the control signals. A power switch provides power to the connected display. An unidirectional translator for HPD is provided.

DP0 Sub-Mode

VIN VOUT 1 16 Protection CH EN Gate Driver Circuitry V<u>CC</u>A CRT CONTRO MODE0 = 0 3 HDMI DP LOGIC MODE1 = 1LS 4 100 ēŚ ≶ ß 33 VCCA 6 $CA_DET_B = 0$ 10 NOT USED 11 VCCA VBIAS 1 MΩ **≥** 1 MΩ ₹ HPD_A HPD_B JI 9 12 8 NOT USED VCCA 100 kΩ≶ 7 NOT USED 100 kΩ AUX_A AUX_B Î I I 2 13 VCCA AUX B# AUX_A# † T T 14 5 15 GND 100 kΩ≶ VOUT

Figure 4. Function Diagram – DP0 Sub–Mode

When an HDMI dongle is attached (CA_DET_B = 1), the device enters DP1 sub-mode. Two autosensing bidirectional logic level translators for DDC signals are

provided. A-side I/Os are referred to VCCA (pin 1), while B-side I/Os are referred to VOUT (pin 16). The function diagram is shown below.

DP1 Sub-Mode

Figure 5. Function Diagram – DP1 Sub-Mode

HDMI Mode

When MODE0 = 1 and MODE1 = 0, the NLPS591 enters HDMI mode.

When $CH_EN = 1$, the device is configured as a HDMI-compliant logic level translator for the control signals. An unidirectional translator for HPD and three autosensing bidirectional level translators for the DDC and CEC signals are provided. A-side I/Os are referred to

VCCA (pin 1), while B-side I/Os, except for CEC_B, are referred to VOUT (pin 16). A CEC3V (pin 2) input is also provided to power the connector-side pull-up of the CEC translator. A power switch provides power to the connected display. The function diagram is shown below.

When $CH_EN = 0$, the device is disabled. The power switch turns off, VOUT is pulled to GND, and the I/O pins (pins 7, 8, 9, 10, 11, 12, 13, 14) go into high–impedance.

Figure 6. Function Diagram – HDMI Mode

CRT Mode

When MODE0 = 1 and MODE1 = 1, the NLPS591 enters CRT mode.

When CH_EN = 1, the device is configured as a VESA-compliant logic level translator for the CRT control signals. Two unidirectional high-drive translators for the HSYNC and VSYNC signals and two autosensing

bidirectional level translators are provided for the DDC signals. A power switch provides power to the connected display. The function diagram is shown below.

When CH_EN = 0, the device is disabled. The power switch turns off, VOUT is pulled to GND and the I/O pins (pins 7, 8, 9, 10, 11, 12, 13, 14) go into high–impedance.

Figure 7. Function Diagram – CRT Mode

Power Switch

A power switch is provided for CRT, HDMI and DP modes, but not for LT mode. The power switch is used to provide power to a connected display. In the CRT and HDMI modes, the power may be turned on or off under user control through the CH_EN pin. When the power switch starts turning on, VOUT is held LOW momentarily before VOUT is released and follows VIN.

In the DP Mode, the CH_EN is not available, hence, the power switch is always on.

The output (VOUT) of the power switch is current–limited. The switch is protected against extended exposure to high current flows by a thermal shutdown protection circuit. The switch is back–drive protected preventing reverse current flow from VOUT to VIN.

Figure 8. Function Diagram – Power Switch

Table 3. MAXIMUM RATINGS

Symbol	Parameter	Value	Condition	Unit
VIN / CEC3V / VCC_I2C_0_B / VCC_I2C_1_B	DC Supply Voltage	–0.5 to +7.0		V
V _{CCA}	Logic DC Supply Voltage	–0.5 to +7.0		V
V _{OUT}	Load Switch Output Voltage	–0.5 to +7.0		V
V _{IOA}	A-Side DC Input/Output Voltage (Power Down)	–0.5 to +7.0	V _{CCA} = 0 V	V
	(Active)	–0.5 to (V _{CCA} + 0.5)	V _{CCA} Active	1
V _{IOB}	B-Side DC Input/Output Voltage (Power Down)	–0.5 to +7.0	V _{CCB} (Note 1) = 0 V	V
	(Active)	–0.5 to (V _{CCB} (Note 1) + 0.5)	V _{CCB} (Note 1) Active	
T _{STG}	Storage Temperature	−65 to +150		°C
ESD	ESD Protection Connector–Side (VOUT, CH1B, CH2B, CH3B, CH4B) All Other Pins	8 2		kV

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Table 4. RECOMMENDED OPERATING CONDITIONS

Symbol	Parameter	Min	Max	Unit

	(Active)	GND	V _{CCB} (Note 1)	
$\Delta t / \Delta V$	Input Transition Rise and Fall Rate A- or B-Ports, Push-Pull Driving		100	ns/V
	Control Input		10	
T _A	Operating Temperature Range	-40	+85	°C

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond

the Recommended Operating Ranges limits may affect device reliability.
V_{CCB} refers to the supply powering the translator B-side I/O pin. This supply could be VOUT, CEC3V, VCC_I2C_0_B or VCC_I2C_1_B, depending on the device function mode.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions. 2. Typical values are for $V_{CCB} = +3.3 \text{ V}$, $V_{CCA} = +1.8 \text{ V}$ and $T_A = +25^{\circ}\text{C}$. V_{CCB} may refer to VIN, AUX or VOUT depend on the operating mode. 3. All units are production tested at $T_A = +25^{\circ}\text{C}$. Limits over the operating temperature range are guaranteed by design. 4. Reverse current protection is activated only when a reverse current threshold of about 200 mA is reached. 5. ΔV_{SW} is the voltage difference across the power switch.

6. Guaranteed by design.

11. These parameters apply to the LT, HDMI and CRT modes only. The power switch turn-on time should be added to translator enable time for HDMI and CRT modes. Maximum CH EN frequency is 10 kHz with minimum high pulse duration of 30 μs.

Table 10. TIMING CHARACTERISTICS in Open Drain Driving Configuration for Bidirectional Transfer Channels:

CH1, CH2, CH3, CH4 in LT Mode for VCCA = 1.65 V to 5.5 V and VCCB = 1.65 V to 5.5 V; CH3, CH4 in DP1 Mode for VCCA = 1.65 V to 5.5 V and VCCB = 3.0 V to 3.6 V;

CH1, CH3, CH4 in HDMI Mode for VCCA = 1.65 V to 5.5 V and VCCB = 4.5 V to 5.5 V;

CH3, CH4 in CRT Mode for VCCA = 1.65 V to 5.5 V and VCCB = 4.5 V to 5.5 V.

(R_{PU} INT = 10 k Ω , C_{LOAD} = 15 pF, driver output impedance \leq 50 Ω , R_{LOAD} = 1 M Ω , unless otherwise specified.

See Figures 11, 12, 13, 14 and 15.)
