onsemi and **onsemi** and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi** product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner. Other names and brands may be claimed as the property of others.

Guidelines for the Use of Scintillators with the J-Series Arrays

ON Semiconductor®

www.onsemi.com

HANDLING

- Remember that the SiPM is a sensitive optoelectronic device and should always be handled as carefully as possible.
- Physical contact with the sensor should be minimized during assembly and ON Semiconductor recommends the use of automatic assembly directly from reels.
- Contact with the sensitive surface, which is glass, should be avoided. In particular, care should be taken to avoid contact with abrasive materials.
- When unpacking, care should be taken to prevent dropping or misorienting the sensors.
- SiPM sensors are ESD sensitive. The following precautions are recommended:
 - ◆ Ensure that personal grounding, environmental controls and work surfaces are compliant with recommendations in JESD625.
 - ◆ Ensure that all personnel handling these devices are trained according to the recommendations in JESD625.
 - ◆ Devices must be placed in an ESD approved carrier during transport through an uncontrolled area.
- The sensor should be disconnected from the bias supply when not in use.
- The sensors should not be load bearing.

APPLICATION NOTE

SCINTILLATOR COUPLING

The bonding of the TSV components to a scintillator crystal should be a permanent arrangement regardless of the adhesive used. If the scintillator crystal needs to be recoupled multiple times, it is recommended that optical grease is used as the coupling medium.

Remember that the sensor covering is glass, and excessive force should not be used during coupling.

SCINTILLATOR DECOUPLING

If optical grease has been used for the coupling, and the scintillator needs to be removed, the user should carefully slide the scintillator off of the array. The scintillator should never be pulled upwards away from the sensor, as the forces involved are sufficient to weaken the interface bond between the silicon and glass. Please refer to the diagrams in Figures 1 and 2.

Figure 1. Carefully slide the scintillator off of the sensor using gentle sideways force.

Figure 2. Never remove the scintillator by pulling upwards.

AND9780/D

CLEANING

Isopropyl alcohol (propan-2-ol) in concentrated form can be used for cleaning of the J-Series TSV sensors.
