

## Test Procedure for the AXDBG-2-GEVK Evaluation Board

### 1 Requirements

- ⑩ Windows computer or laptop
- ⑩ AXSDB (part of the AXSEM IDE)
- ⑩ F143 MOD A or B

### 2 Visual inspection

1. Are all required parts assembled?

2. Pinheader mounted correctly?
3. All 4 jumpers mounted? (if not, mount them manually)

### 3 Programming

1. Connect the AXDBG to a computer (the first time Windows requires some time to install drivers)
2. Open a Command terminal CMD
3. Execute: *axftdieprog -p -f -s 3*
4. Unplug and re-plug the AXDBG (required for Windows to recognize the newly installed Software)

### 4 Testing

1. Connect a F143-MINI-A-MOD or F143-MINI-B-MOD to the AXDBG
2. Execute: *axsdb --flashprog \path\to\file\sendCW.omf*

Desired output:

```
axsdb --flashprog sendCW.omf
Programming Serial 00000003
Bulk erase...
Flash program...
Run program...
```

3. Check the red LED, it should be illuminated during the programming

4. Check the green LED, it should flash shortly after programming

## 5 Packaging

- ⊙ If all test are passed the AXDBG get sealed in 3" x 5" ESD bags (size is not critical)

## 6 Boxing

Note: AXDBG is also part of most other DVK's, therefore only a small portion of the AXDBG gets packaged in boxes and sent to Singapore.

Box: Rajapack RPT102

Contents:

1. AXDBG
2. Mini USB to USB cable
3. Flat ribbon cable
4. Disclaimer, OnSemi logo is on top, first thing to see if box is opened
