LiB Charge/Discharge Controller for Bicycle LED Light Systems

Device	Application	Input Voltage	Output Power	Topology	I/O Isolation
LC709301F	Bicycle LED Light	4.5 - 5.5	10 W	Charge/Discharge Controller	N/A

	Charge	Discharge
Output Voltage	4.2 V	4.2-5.0 V
Nominal Current	1000 mA	1000 mA
Max Current	2000 mA	2000 mA
Min Current	25 mA	25 mA

Device Efficiency	80 - 85 %
Operating Temp. Range	-40 to 85 °C
Overcharge/Discharge Protection	Yes
Pre-charge Control	Yes
Lib Protection	Yes
Low Battery Indication	Yes

Circuit Description

The LC709301F is a one-chip solution LSI with charging/discharging and overall control functions for bicycle LED lights. Included is a DC/DC charging system to charge high power lithium-ion batteries quickly and efficiently. Supported are 1-cell lithium-ion/polymer (li+) batteries with charging ranges from 25 mA to 2000 mA. The LC709301F is highly efficient for LED lighting operations with ultra-low stand-by current consumption. It includes various safety features for battery and LED such as over current/voltage protection, thermal shutdown. It supports high, medium, low and flashing modes of operation for LED design. Boost efficiency and standby current for the LC709301F is plotted below.

Figure 1: LC709301F boost efficiency based on battery capacity

Figure 2: LC709301F standby current including Lib-protection IC

Key Features

- DC-DC USB charging support up to 2000 mA range
- LED brightness remains constant even if battery voltage continuously degrades with long use
- Ultra-low standby current consumption
- Supports pass-through charge topology, DC5V output is directly powered via USB when wall power is connected
- Programmable MCU with I2C support
- MCU with on-chip thermistor for providing safety to LED and device
