DESCRIPTION AND PURPOSE

Currently ON Semiconductor SOIC products are being assembled at multiple assembly locations using either Sn-Pb or 2 layer (NiPd) pre-plated frames. ON Semiconductor at Carmona, Philippines has qualified 3-layer (Ni-Pd-Au) pre-plated lead frames for SOIC 8/14/16 lead packages and will be converted to the 3 layer system. This change is being implemented to consolidate multiple assembly processes. ON Semiconductor at Carmona, Philippines has been using the 3 layer pre-plated frames on TSSOP packages since November 1999. This additional change in SOIC packages is an incremental step toward the worldwide reduction of Pb in manufacturing.

Upon expiration of this PCN, due to the multiple assembly locations for SOIC products, customers may receive products with any of the three systems. These are the Sn-Pb, 2 layer Ni-Pd or the 3 layer Ni-Pd-Au systems. All of the required reliability testing has been completed with satisfactory results.
